Creating Articles in the Admin App

You create a new article with color, size, and material variations in a single step. The system automatically generates all article variations from your entries.

Prerequisites

- Access to the **Admin App**
- Permission for the **Articles** section
- At least one **Brand**, one **Supplier**, and one **Category** exist in the system

Overview

The process in six steps:

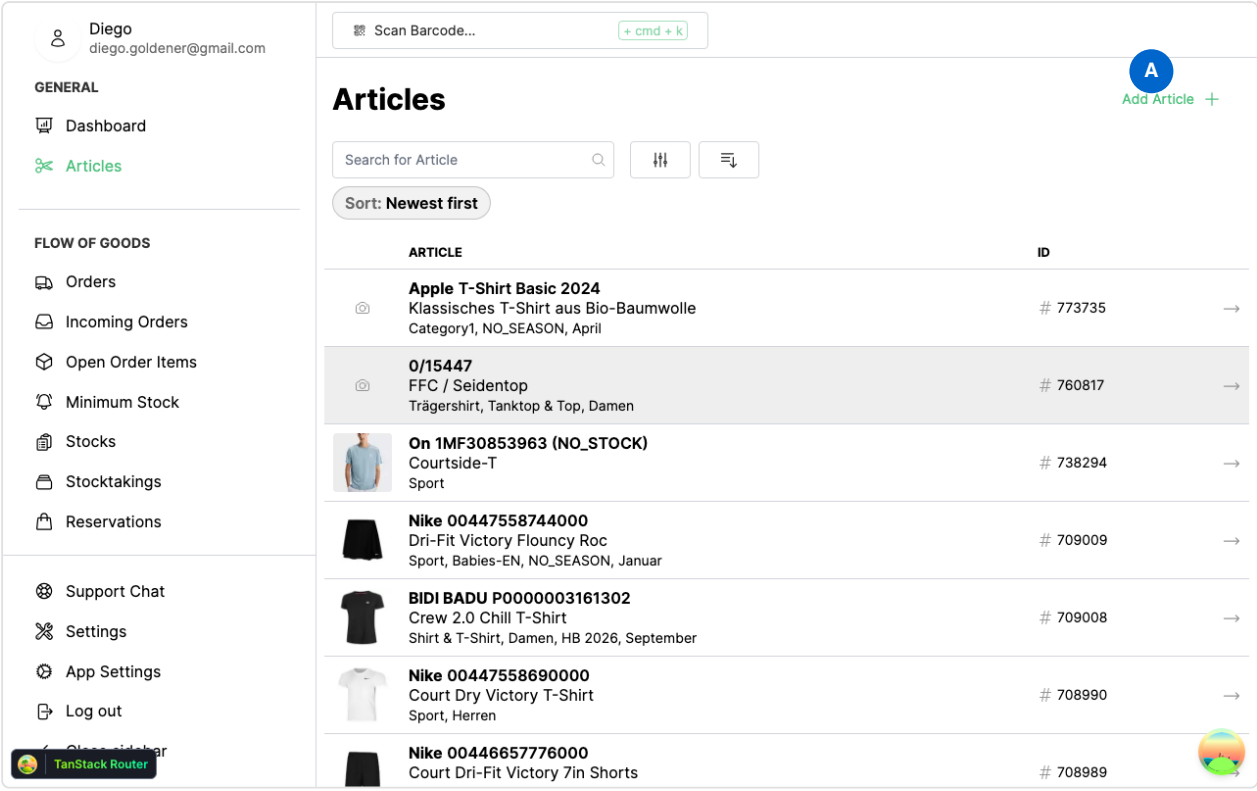
1. **Open the article form** — You navigate to the creation form.
2. **Fill in model details** — You enter brand, supplier, article number, and category.
3. **Assign season and collection** — You optionally assign the article to a season and collection.
4. **Set prices** — You define purchase price, sales price, and MSRP.
5. **Define variations** — You specify colors, sizes, and materials.
6. **Save the article** — The system creates the article with all variations.

For articles without variations, a simplified form is available — see the section Creating a single article without variations.

1. Open the article form

1. Open the **Admin App**.
2. Click **Articles** in the sidebar.
3. Click **Add Article** in the top right corner.

The system displays the creation form with the title **Article — create**.



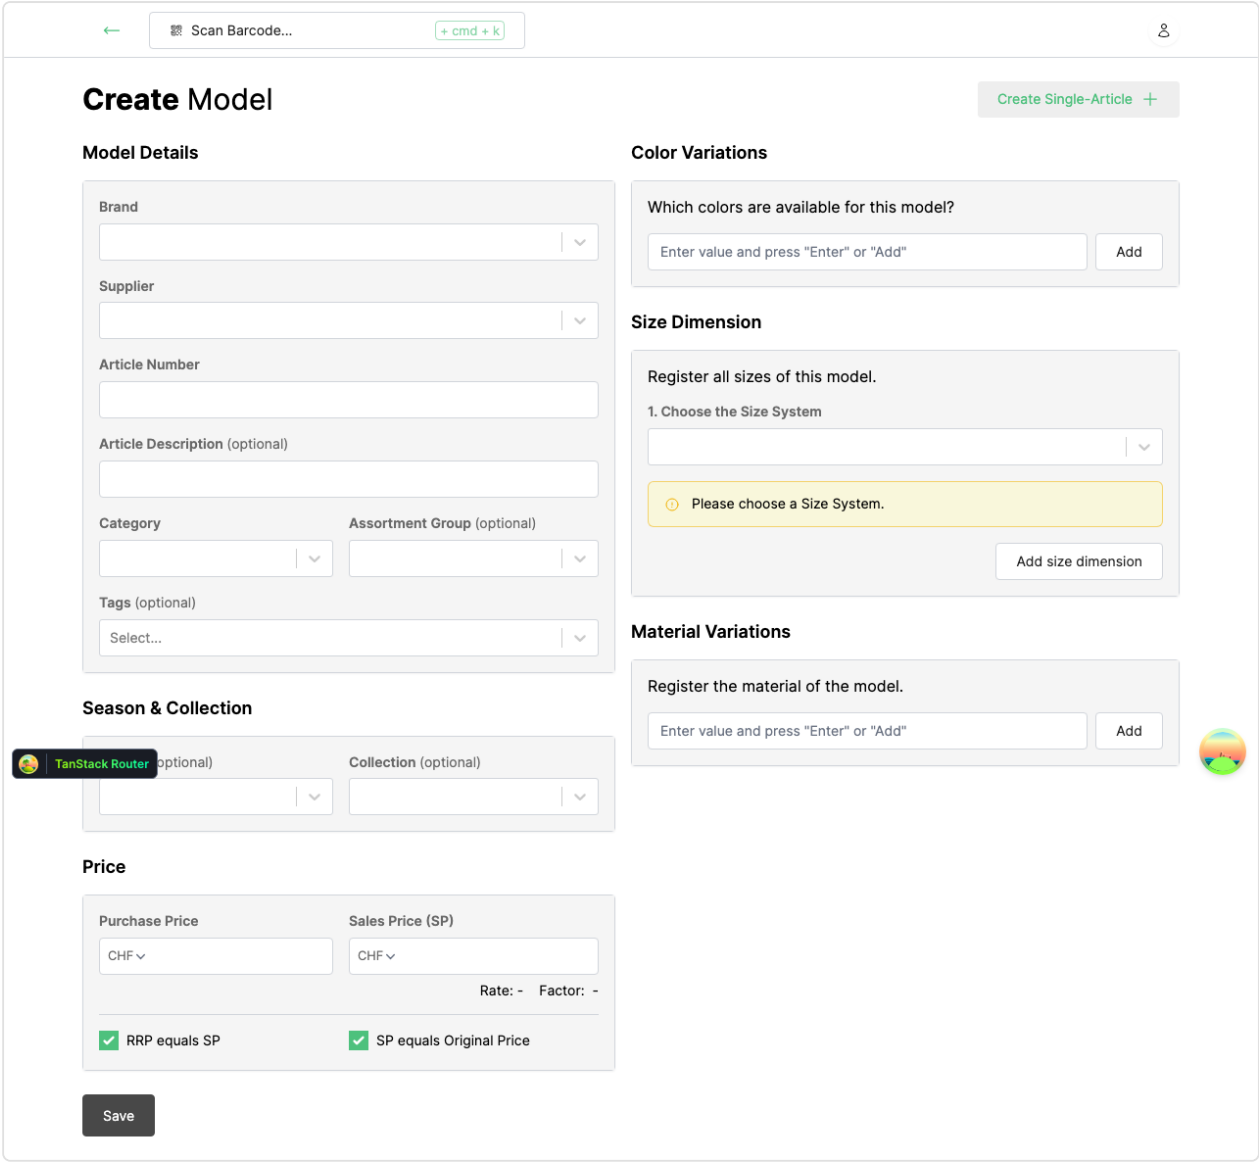
***A** Add Article*

> **Note:** If you want to carry over data from the last entry, click **Pre-fill from last entry**. The system fills all fields except the **Article Number** with the previously entered values. The button only appears if you have previously created an article.

---

2. Fill in model details

The form is divided into two columns: On the left, you enter the model details, season/collection, and prices. On the right, you define the variations (colors, sizes, material).

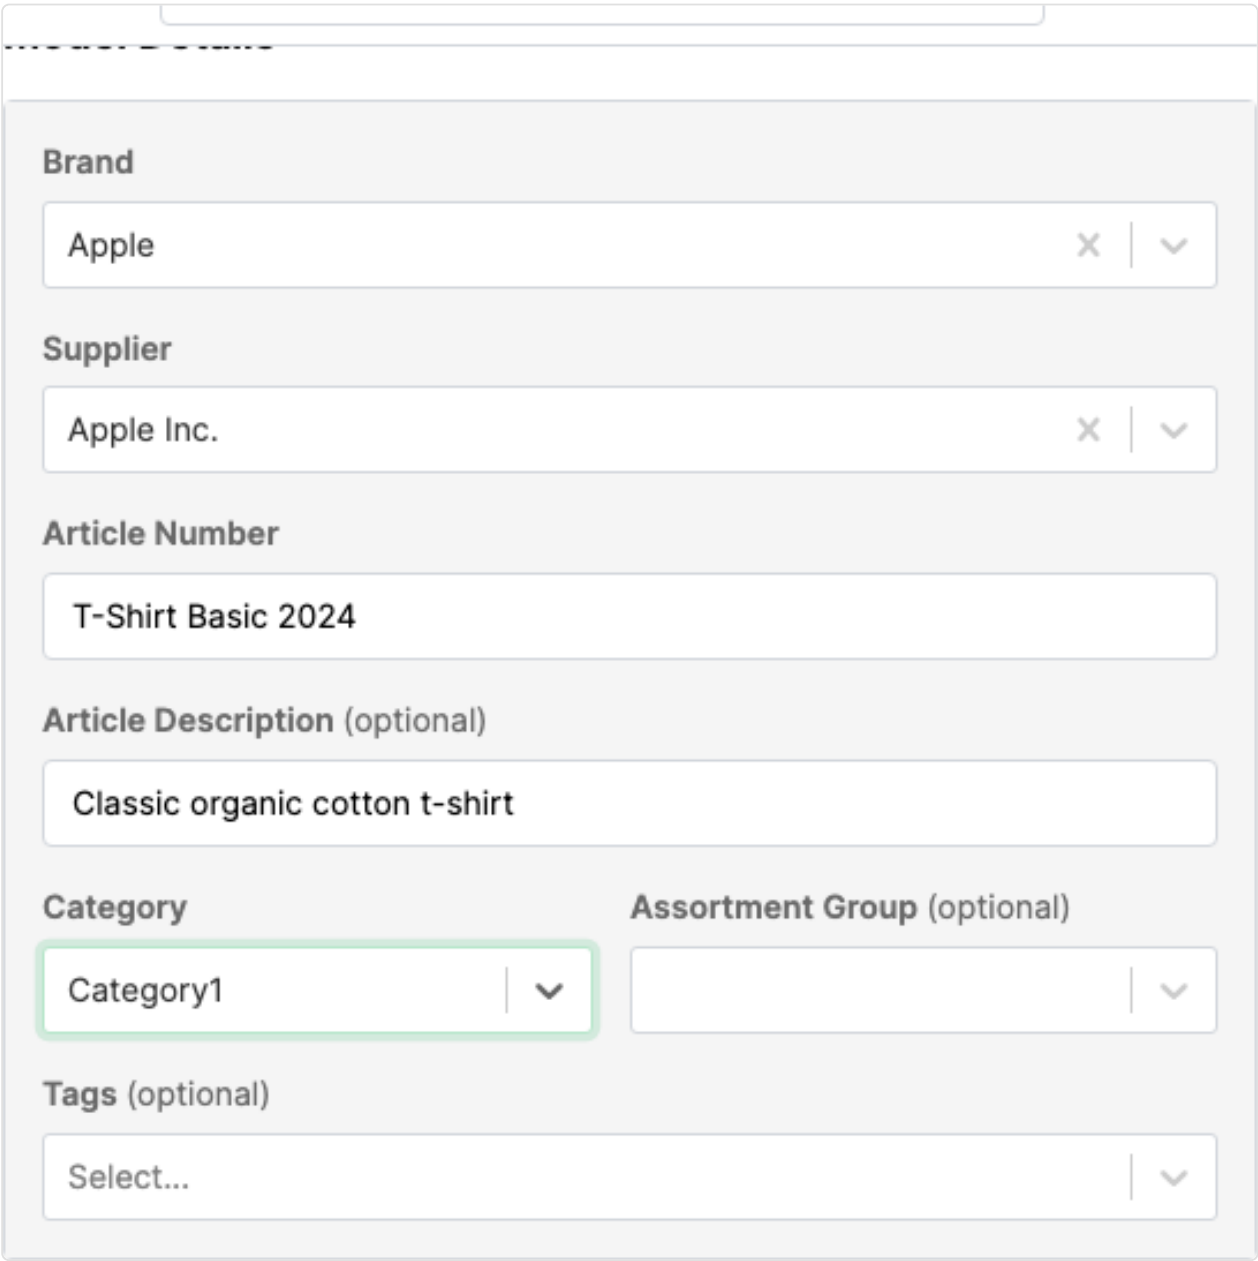


Left: Model details, season/collection, prices. Right: Variations.

Fill in the following fields in the **Model Details** section:

Field	Required	Description
Brand	Yes	Brand of the article. When you select a supplier, the system restricts the brand selection to that supplier's brands.
Supplier	Yes	Supplier of the article. When you select a brand, the system restricts the supplier selection accordingly.
Article Number	Yes	Name or number of the article.
	No	Optional description of the article.

Field	Required	Description
Article Description		
Category	Yes	Category of the article. The system shows recommendations based on supplier and size system.
Assortment Group	No	Optional assignment to an assortment group.
Tags	No	Optional tags for labeling.



Model details with required fields: Brand, Supplier, Article Number, Category.

> **Note: Brand** and **Supplier** filter each other. If only one matching entry exists, the system selects it automatically.

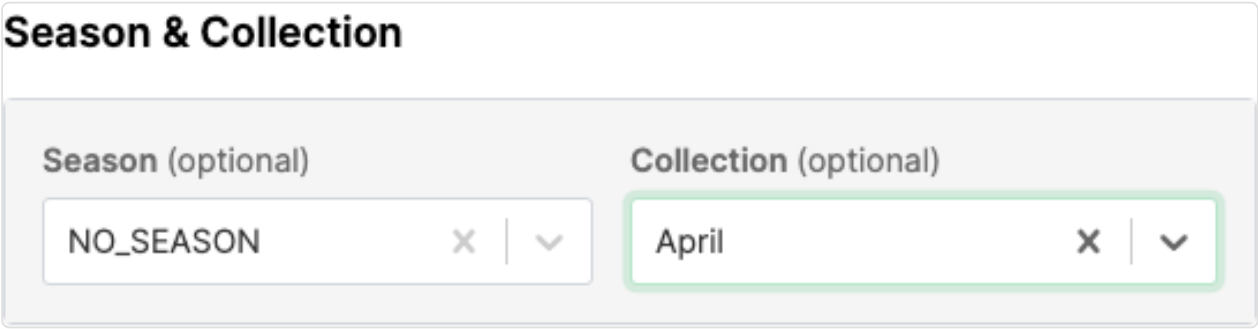
---

3. Assign season and collection

In the **Season & Collection** section, you can optionally assign the article to a season and collection:

1. Select a **Season** if needed.
2. Select a **Collection** if needed. The system shows recommendations based on the selected supplier.

Both fields are optional. If you do not need an assignment, skip this section.



Season and collection are optional.

---

4. Set prices

Fill in the following fields in the **Price** section:

Field	Required	Description
Purchase Price	Yes	Purchase price of the article.
Sales Price	Yes	Sales price for the end customer.

Setting the MSRP

The checkbox **MSRP equals Sales Price** is enabled by default. The system uses the sales price as the manufacturer's suggested retail price (MSRP).

If the MSRP differs from the sales price:

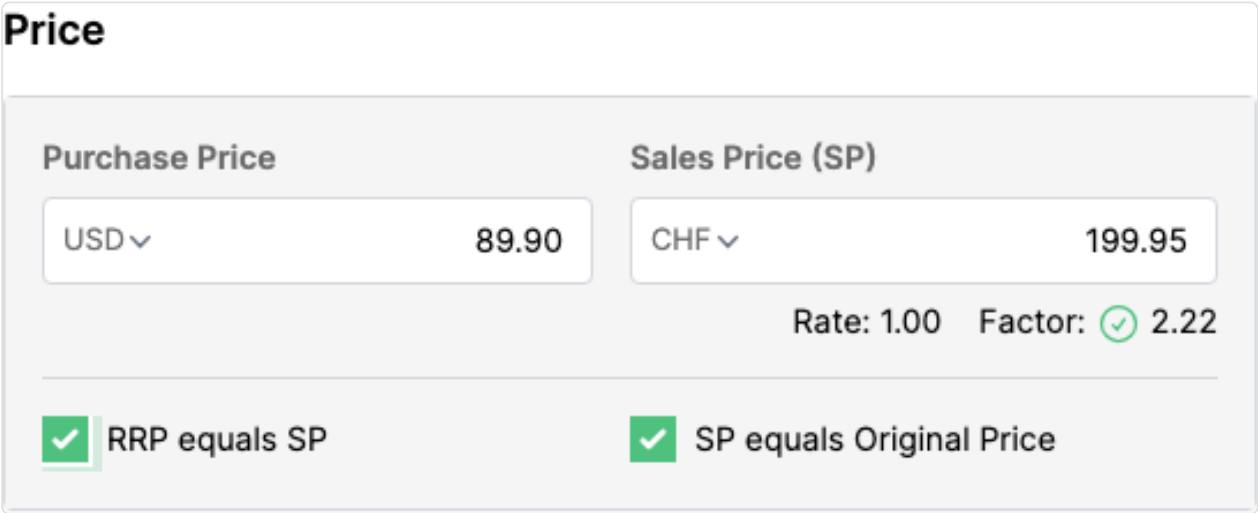
1. Disable the checkbox **MSRP equals Sales Price**.
2. Enter the desired **MSRP**.

Setting the original price

If the sales price differs from an original price (e.g., for promotions):

1. Disable the checkbox **Sales Price equals Original Price**.
2. Enter the **Original Price**.

The system calculates the **Discount** automatically as a percentage.



Purchase price and sales price are required fields.

> **Note:** When you select a supplier, the system automatically uses that supplier's stored currency for the purchase price.

5. Define variations

On the right side of the form, you define the article's variations. The system automatically creates all combinations of the specified colors, sizes, and materials.

Color Variations

In the **Color Variations** section, enter the available colors. Confirm each entry individually. This field is optional — without a color entry, the system does not create color variations.

Size Dimension

In the **Size Dimension** section, select a size system and the corresponding sizes. The system shows recommendations based on the selected supplier and category.

> **Important:** The **Size Dimension** is a required field. Without a size specification, the article cannot be saved.

Material Variations

In the **Material Variations** section, enter the material composition (e.g., "80% Cotton, 20% Polyester"). Confirm each entry individually. This field is optional.

Color Variations

Which colors are available for this model?

Enter value and press "Enter" or "Add" | Add

Black × | White × | Navy ×

Size Dimension

Register all sizes of this model.

1. Choose the Size System

Please choose a Size System.

Add size dimension

Material Variations

Register the material of the model.

Enter value and press "Enter" or "Add" | Add

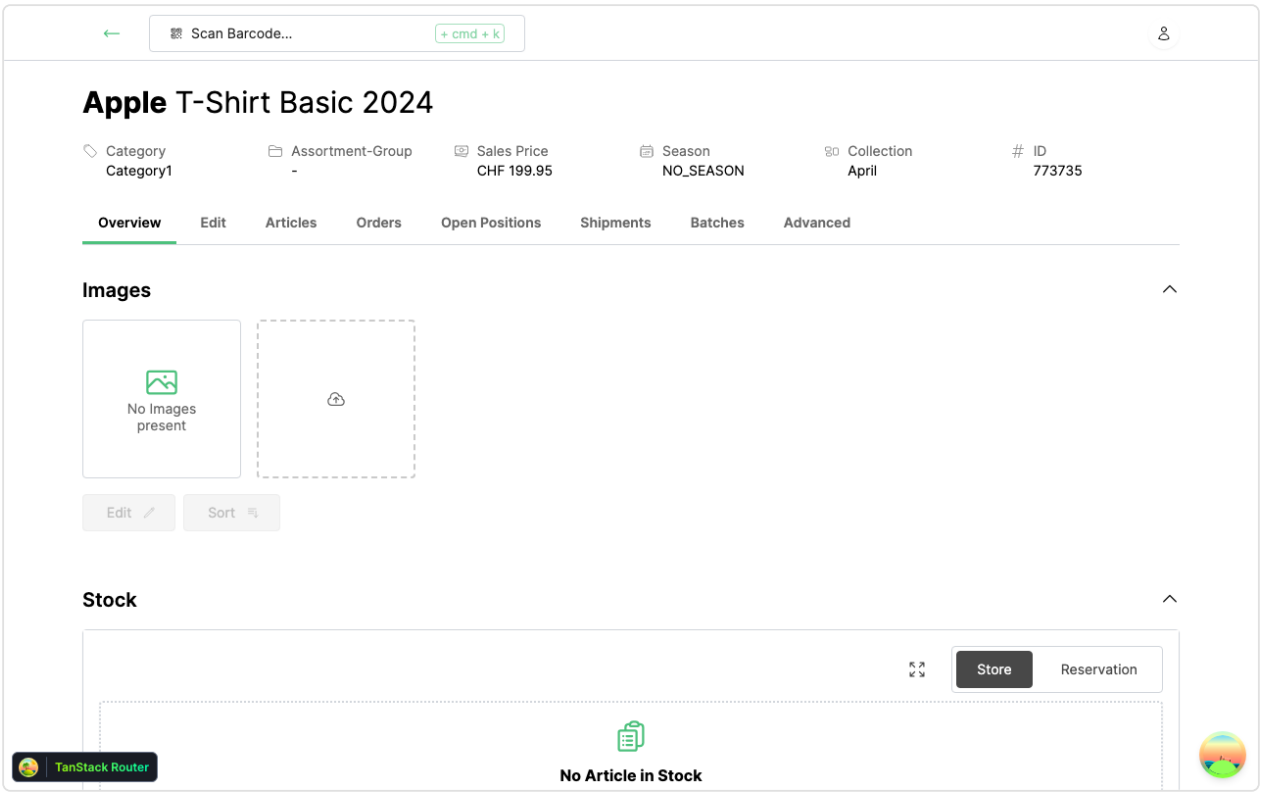
Organic Cotton ×

Colors and material are optional. The size dimension is a required field.

6. Save the article

1. Click **Save**.
2. The system creates the article with all variation combinations and redirects you to the article overview.

On the article overview, the following tabs are available: **Overview**, **Edit**, **Articles**, **Orders**, **Open Positions**, **Shipments**, **Batches**, and **Advanced**.



Article overview with tabs after successful creation.

> **Note:** On the **Articles** tab, you can add further variations afterwards — using the **Add Variations** button with the options **Add Color Set**, **Add Material Set**, or **Add Size Set**.

Creating a single article without variations

For articles without color, size, or material variations, a simplified form is available.

1. Open the article form as described in step 1.
2. Click **Add Single Article** in the top right corner.

3. Fill in the **Model Details** (same fields as in the standard form, without season and collection).
4. Set the **Prices** (same fields as in the standard form).
5. Click **Save**.

Differences from the standard form

Property	Standard creation	Single article
Color Variations	Yes	No
Size Dimension	Yes (required)	No
Material Variations	Yes	No
Season & Collection	Yes	No
Result	Article with variations	Single article without variations

---

Frequently asked questions

How many variations does the system create? The system creates one variation for each combination of color, size, and material. Example: 3 colors, 4 sizes, and 2 materials result in 24 variations.

Can I add variations afterwards? Yes. Open the article and switch to the **Articles** tab. Using **Add Variations**, you can add further colors, sizes, or materials.

Can I convert a single article into a variation article afterwards? Yes. Open the article, switch to the **Articles** tab, and add colors, sizes, or materials there.

Editing Existing Articles in the Admin App

You edit prices, upload images, and adjust article properties — individually or for multiple variants at once.

Prerequisites

- Access to the **Admin App**
- Permission for the **Articles** section
- At least one article with variants exists in the system

Overview

Three common editing tasks:

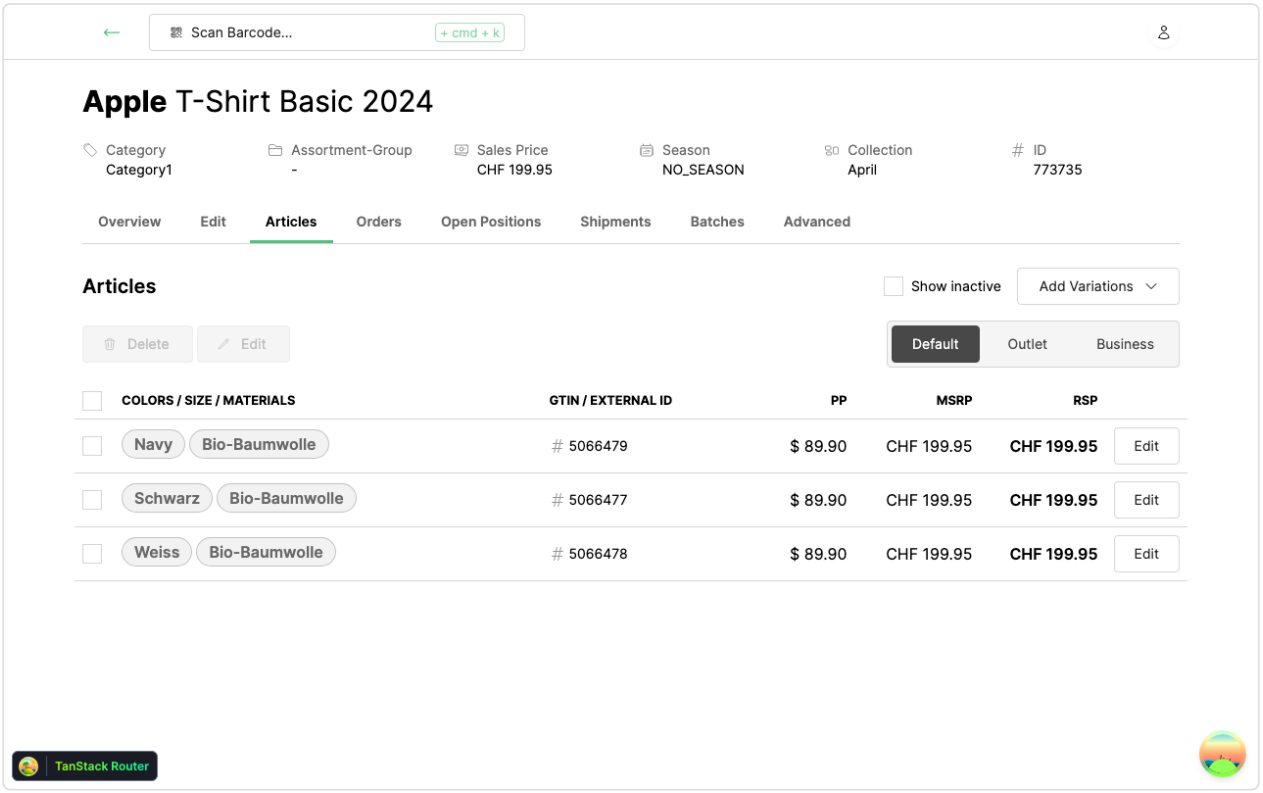
1. **Change prices** — You adjust purchase price, sales price, or original price.
2. **Upload images** — You add product photos to the article.
3. **Set an original price** — You enter a different original price that appears struck through on the label.

---

1. Change prices

Edit a single variant

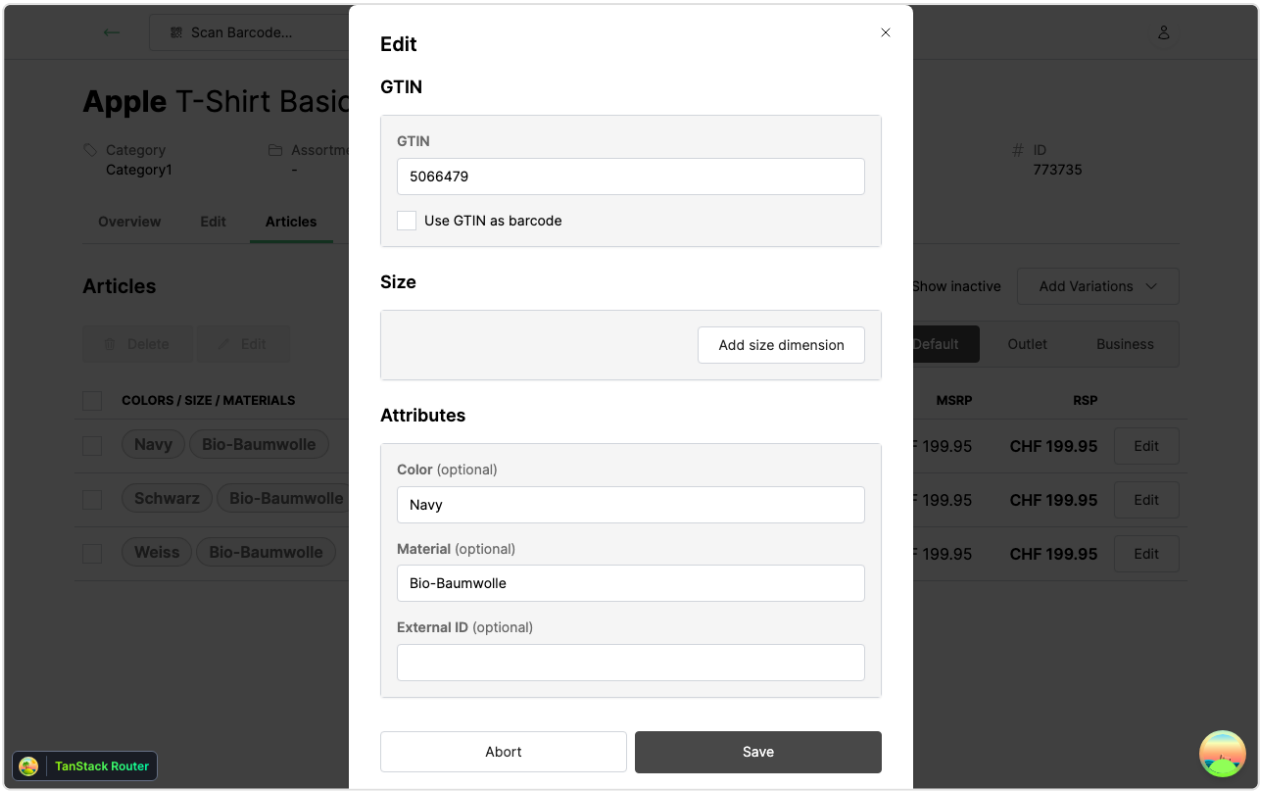
1. Open the **Admin App**.
2. Click **Articles** in the sidebar.
3. Open the desired article.
4. Switch to the **Articles** tab.



Variant list with price columns (PP, SP, MSRP).

1. Click **Edit** at the end of the row.

The system opens an edit window with two sections: **Attributes** and **Prices**.



Edit modal with attributes and price fields.

1. Adjust the desired price fields:

Field	Description
Purchase Price	Price at which you buy the article from the supplier.
Sales Price	Price the customer pays.
MSRP equals SP	When enabled, the system uses the sales price as MSRP.
MSRP	Manufacturer's suggested retail price. Only visible when the checkbox is disabled.

1. Click **Save**.

Edit multiple variants at once

1. Enable the **checkboxes** next to the desired variants.
2. Click **Edit** in the action bar above the list.
3. Adjust the prices. Changes apply to all selected variants.

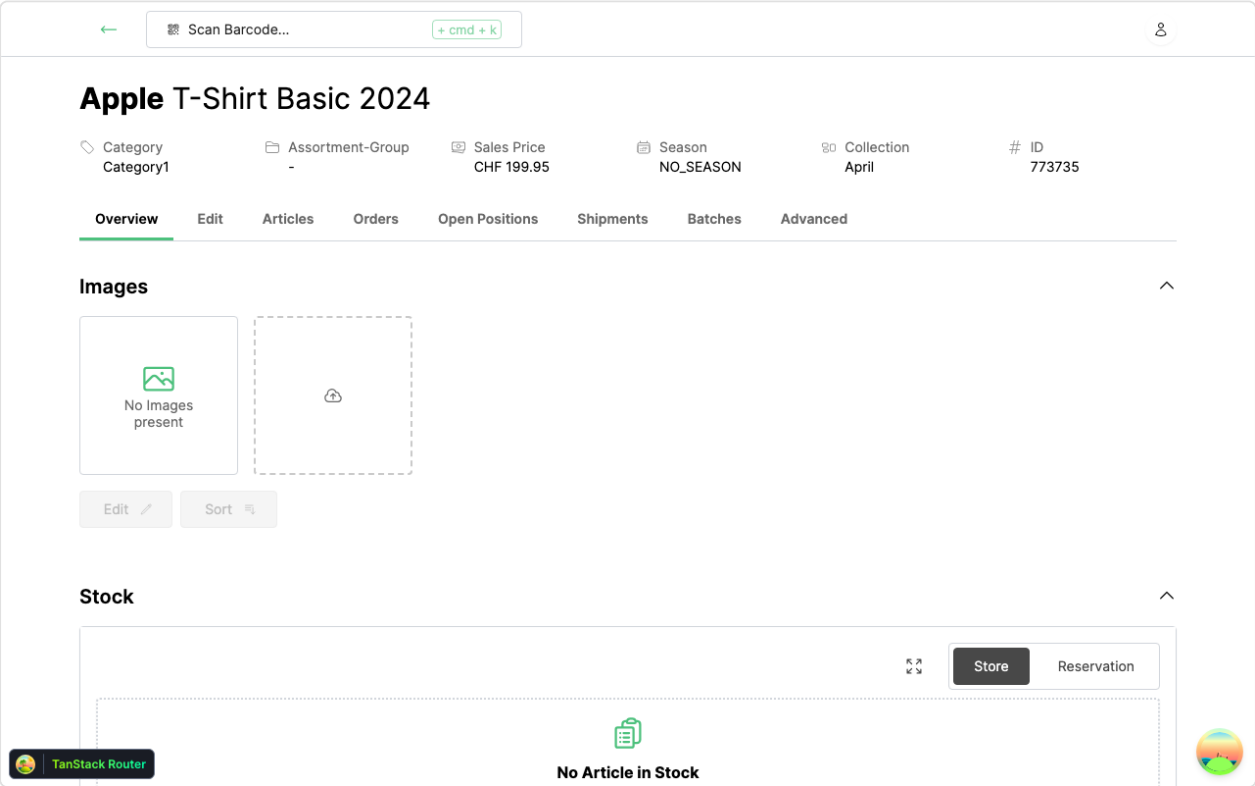
4. Click **Save**.

> **Note:** Bulk editing only supports price changes. For attribute changes (color, material, GTIN), edit each variant individually.

---

2. Upload images

1. Open the desired article.
2. Switch to the **Overview** tab.
3. Open the **Images** section.



Overview tab with image upload.

1. Drag an image into the upload area or click to select a file.
2. The system uploads the image and displays it in the overview.

> **Note:** You can upload multiple images at once. Use the **Sort** button to change the image order.

---

3. Set an original price

When the sales price differs from an original price (e.g., for promotions), the original price appears struck through on the label.

Single variant

1. Open the article and switch to the **Articles** tab.
2. Click **Edit** at the end of the row.
3. Disable the **SP equals Original Price** checkbox.
4. Enter the **Sales Price** (price the customer pays).
5. Enter the **Original Price** (displayed struck through on the label).
6. Click **Save**.

The system calculates the **discount** automatically as a percentage.

Multiple variants at once

1. Enable the checkboxes next to the desired variants.
2. Click **Edit**.
3. Disable the **SP equals Original Price** checkbox.
4. Enter the prices.
5. Click **Save**.

Frequently asked questions

Can I change the price for all variants at once? Yes. Enable the checkboxes next to the desired variants and click **Edit**. The price change applies to all selected variants.

Where do I upload images? Open the article and switch to the **Overview** tab. In the **Images** section, you can upload images via drag-and-drop or the upload dialog.

What is the difference between sales price and original price? The **sales price** is the current price the customer pays. The **original price** appears struck through on the label and shows the previous or regular price.

Deleting and Restoring Articles in the Admin App

You delete individual variants or entire articles, restore deleted variants, and clean up duplicate articles.

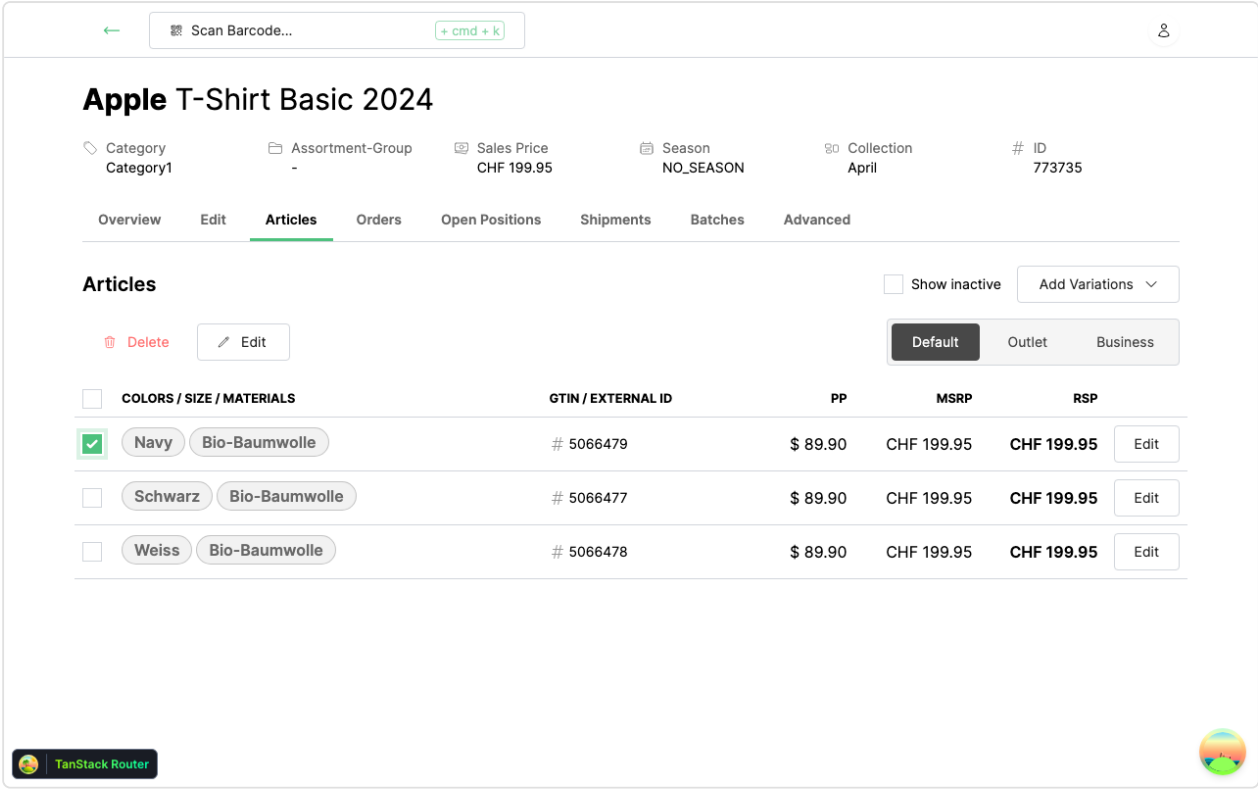
Prerequisites

- Access to the **Admin App** with **Admin rights** (not possible with a Team Account)
- Permission for the **Articles** section

1. Delete variants

You can deactivate individual variants of an article without deleting the entire article.

1. Open the **Admin App**.
2. Click **Articles** in the sidebar.
3. Open the desired article.
4. Switch to the **Articles** tab.
5. Enable the **checkboxes** next to the variants you want to delete.
6. Click **Delete** in the action bar.
7. Confirm the deletion.



Select and delete variants.

The deleted variants are deactivated and no longer visible in the system — they can be restored if needed.

> **Note:** Deleted variants remain in existing shipments and orders.

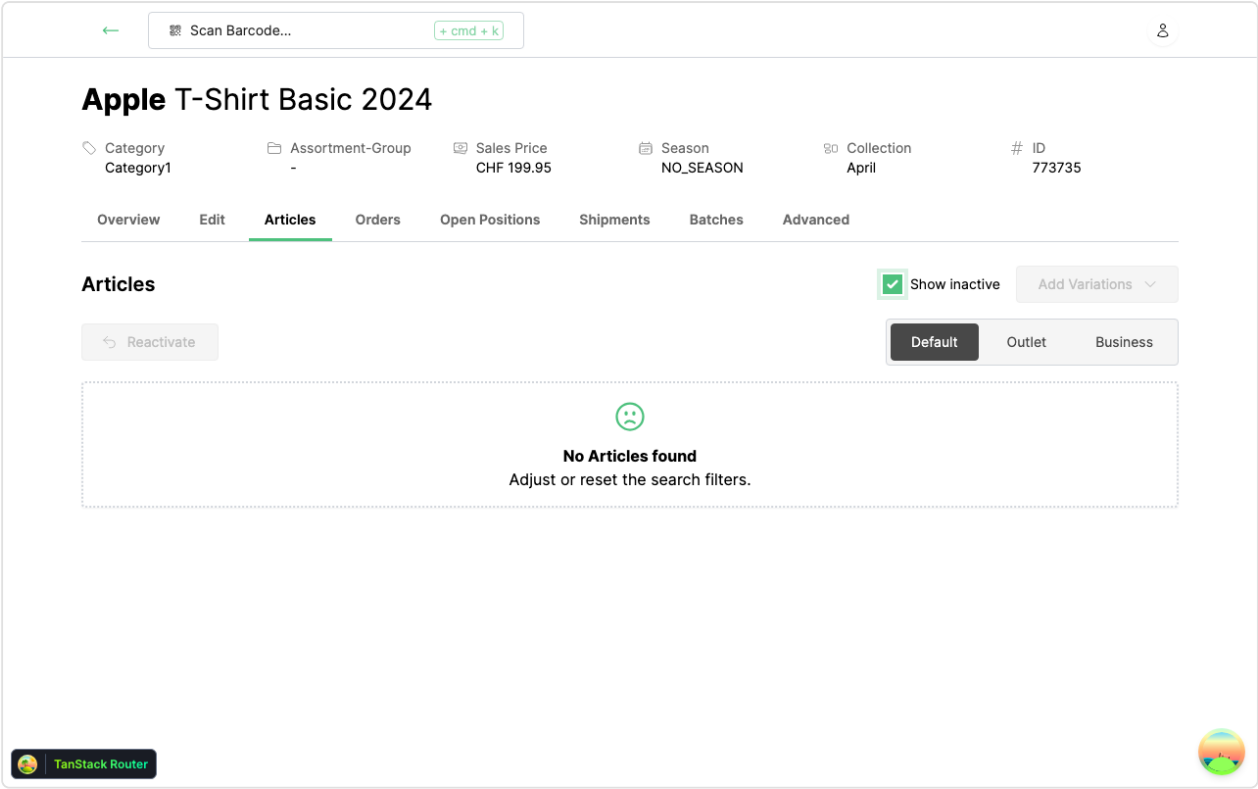
---

2. Restore variants

You can reactivate deleted variants at any time.

1. Open the article and switch to the **Articles** tab.
2. Enable the **Show inactive** checkbox.

The system shows the deactivated variants in the list.



Show inactive variants and restore them.

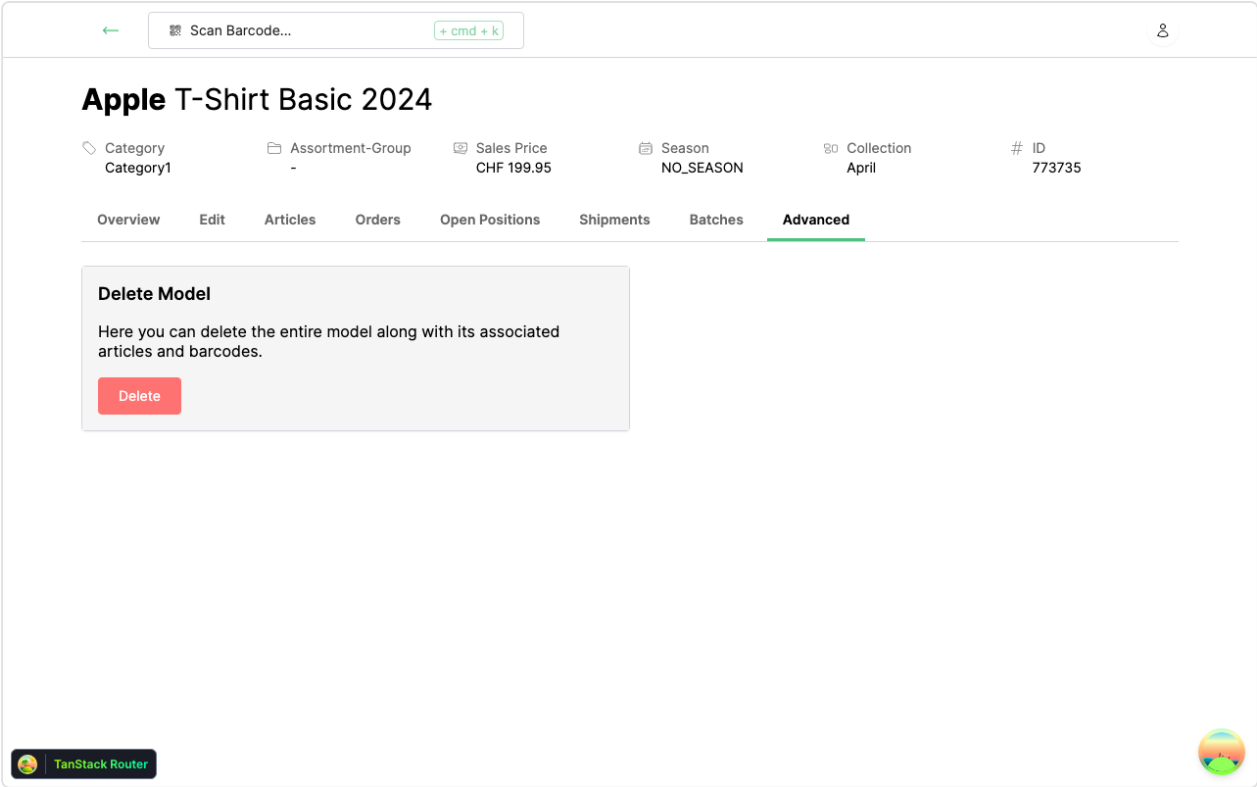
1. **Single variant:** Click **Reactivate** at the end of the row.
2. **Multiple variants:** Enable the checkboxes and click **Reactivate** in the action bar.
3. Confirm the restoration.

---

3. Delete an entire article

To permanently delete an article with all its variants and barcodes:

1. Open the article.
2. Switch to the **Advanced** tab.
3. Click **Delete**.



Delete entire article on the Advanced tab.

1. Enter the number of variants to confirm the deletion.
2. Enable the checkbox **I want to delete all related Article-Barcodes** to avoid duplicate barcodes.
3. Click **Delete**.

> **Important:** This action cannot be undone. Orders and shipments with these variants remain untouched.

---

4. Clean up duplicate articles

If an article was accidentally created twice, clean up the duplicates in four steps:

1. **Find the duplicate** — Search for the duplicate articles in the article list.
2. **Choose the version** — Check which version should be kept.
3. **Transfer stock** — Remove the stock from the incorrect article and transfer it to the correct one.

4. **Deactivate the incorrect article** — Delete the variants of the incorrect article (see section 1) or delete the entire article (see section 3).

> **Note:** Stock adjustments are made via the Stocktaking App or the Admin App. Make sure the incorrect article has no remaining stock before deactivating it.

Frequently asked questions

Can I restore deleted variants? Yes. Enable the **Show inactive** checkbox on the **Articles** tab and click **Reactivate**.

Can I restore an entire deleted article? No. Entire articles deleted via the **Advanced** tab cannot be restored. Only individual variants can be reactivated.

What happens to the barcodes when deleting? Barcodes are only deleted if you enable the corresponding checkbox during deletion. Without this option, barcodes remain and can cause duplicates.

Managing Orders in the Admin App

You create orders for suppliers, add articles, and manage the order status — from creation through to sending the order to a brand representative.

Prerequisites

- Access to the **Admin App**
- Permission for the **Orders** section
- At least one **Supplier** configured under **Settings > My Suppliers**
- At least one **Store** set up in the system

Overview

The process in five steps:

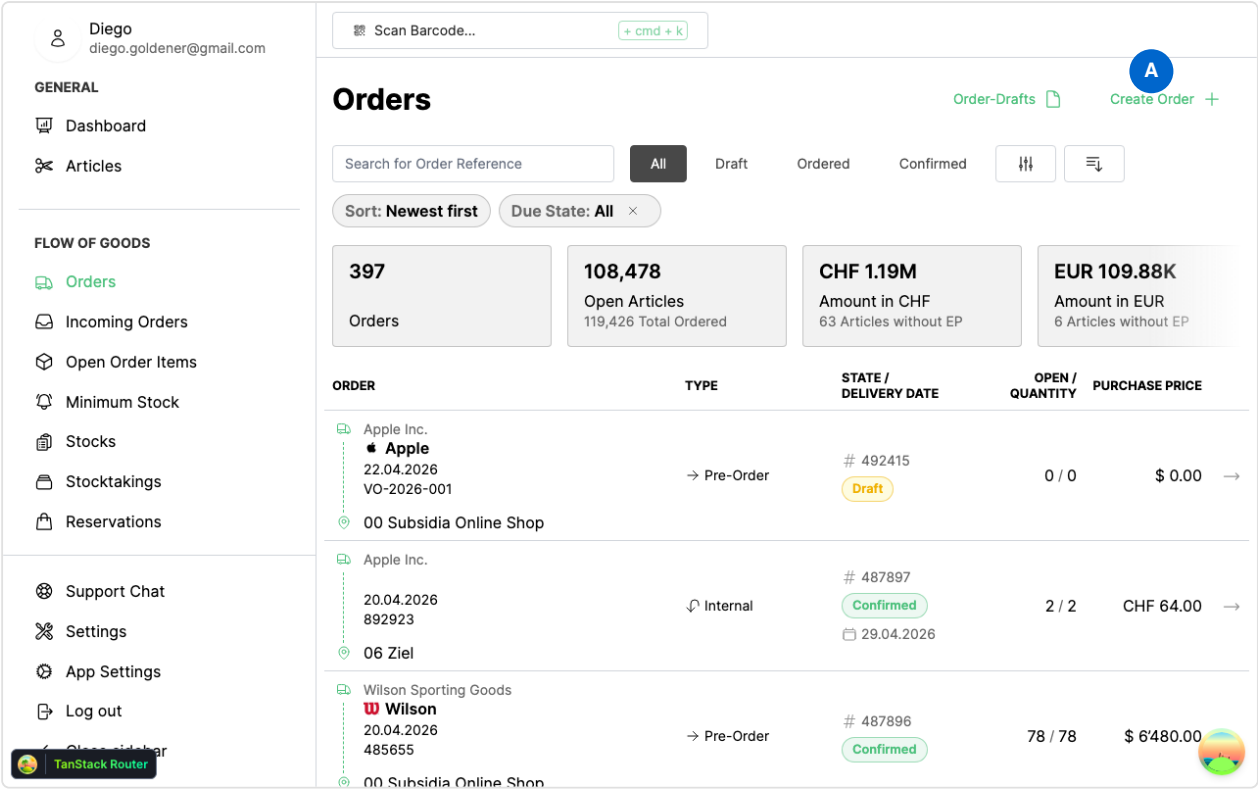
1. **Create an order** — You create a new order with supplier, store, and delivery dates.
2. **Add articles to the order** — You select existing articles and enter order quantities.
3. **Create a new article from the order** — You create an article that does not yet exist directly from the order (optional).
4. **Change the order status** — You set the order to **Confirmed**, **Ordered**, or back to **Draft**.
5. **Send the order to a contact** — You send the order via email to a brand representative (optional).

---

1. Create an order

1. Open the **Admin App**.
2. Click **Orders** in the sidebar.
3. Click **Create Order** in the top right.

The system displays the order form.

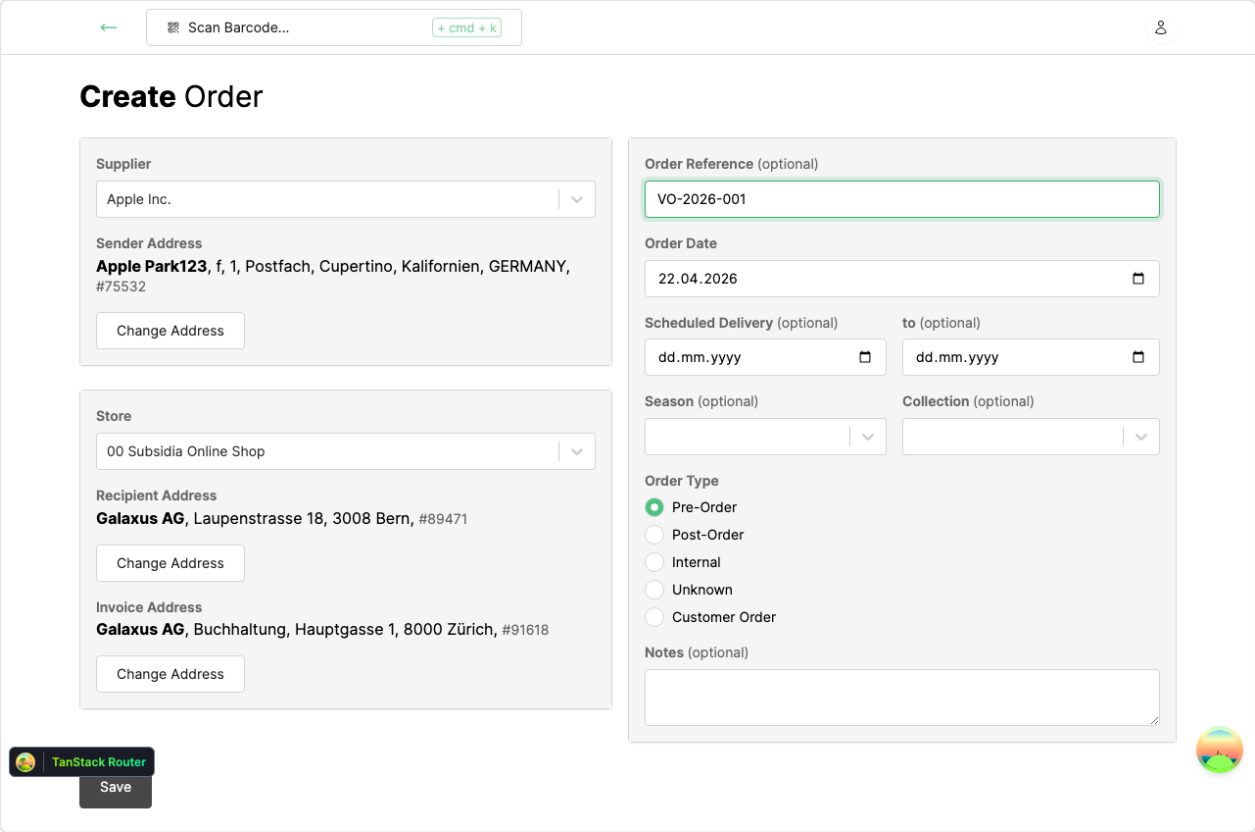


A Create Order

Fill in the following fields:

Field	Required	Description
Supplier	Yes	Search for a supplier or brand. The system suggests configured suppliers.
Sender Address	Yes	The system automatically fills in the supplier's order address.
Store	Yes	The store where the order will be delivered.
Recipient Address	Yes	The system automatically fills in the store address.
Invoice Address	Yes	The system automatically fills in the store address.
Order Date	Yes	Defaults to today's date.
Order Type	Yes	Pre-Order, Post-Order, Internal, Customer Order, or Unknown.
Order Reference	No	Optional custom reference number.
	No	Expected delivery period (from–to).

Field	Required	Description
Scheduled Delivery		
Season	No	The system shows recommendations based on the delivery date.
Collection	No	The system shows recommendations based on the supplier.
Notes	No	Free text field for additional information.



Order form with supplier, store and delivery dates.

1. Click **Save**.

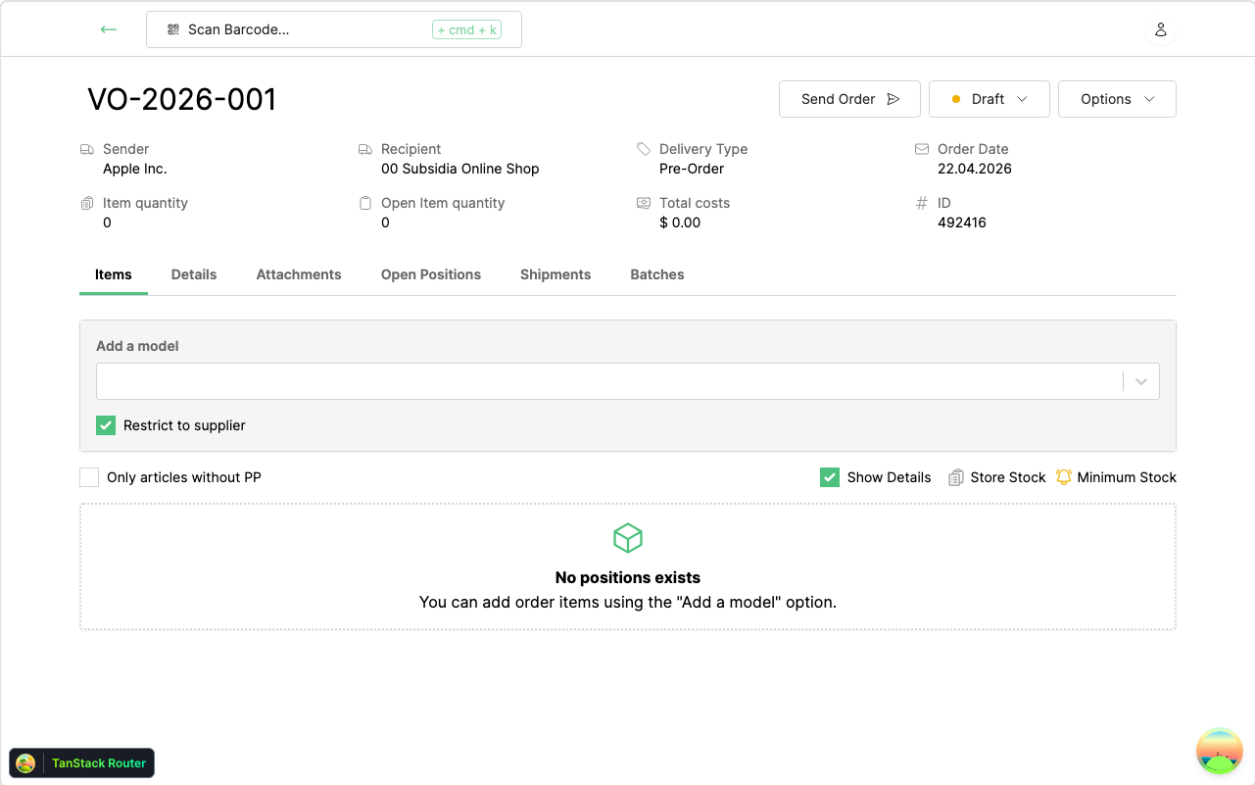
The system creates the order with status **Draft** and redirects you to the order overview.

> **Note:** The **Sender Address**, **Recipient Address**, and **Invoice Address** are automatically populated once you select a supplier and store. You can adjust the addresses manually if needed.

2. Add articles to the order

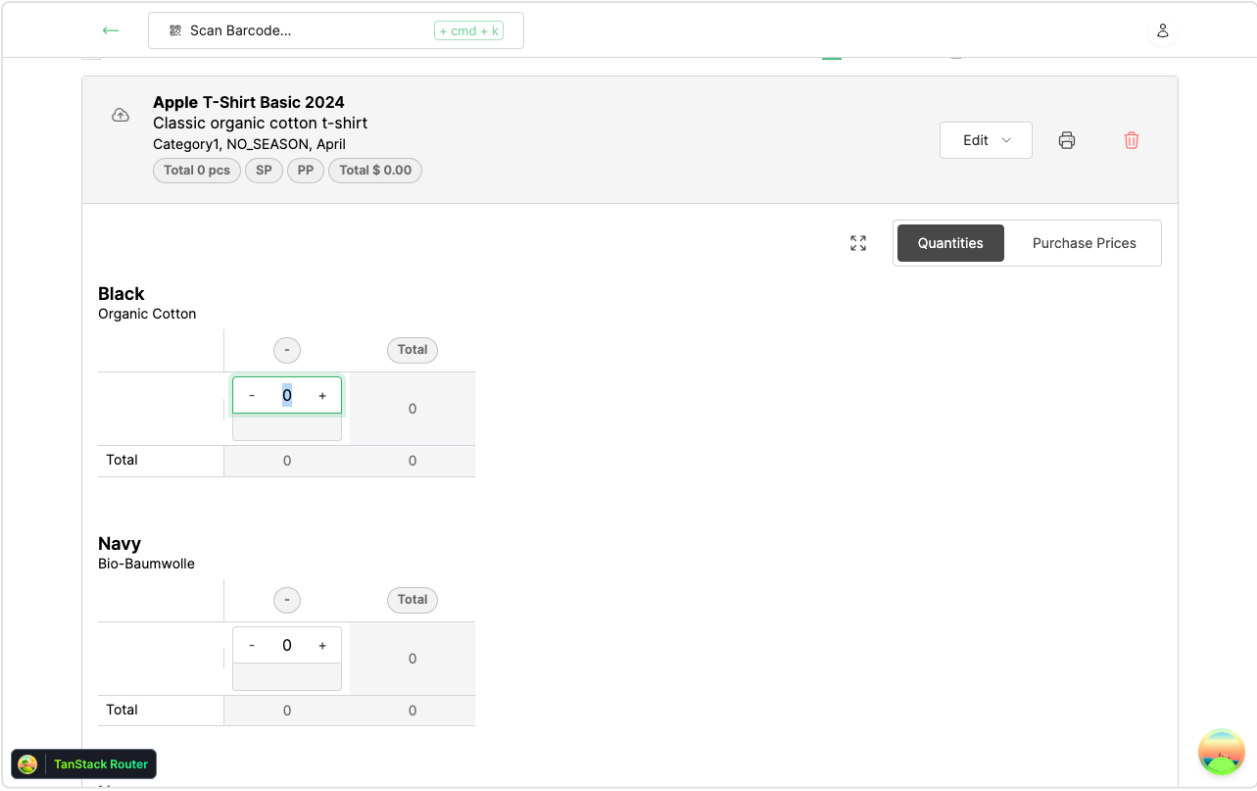
On the **Items** tab, you add articles to the order and enter quantities per variant.

1. Open the order.
2. Type the article name or number in the **Add a model** field.
3. Select the desired article from the suggestion list.



Order overview in Draft status with article search.

1. Enter the desired **order quantities** per color and size.



Enter order quantities per color and size.

1. Repeat steps 2–4 for additional articles.

> **Note:** The **Add a model** field is only visible when the order status is **Draft**. Enable the **Restrict to supplier** checkbox to show only articles from the order's supplier.

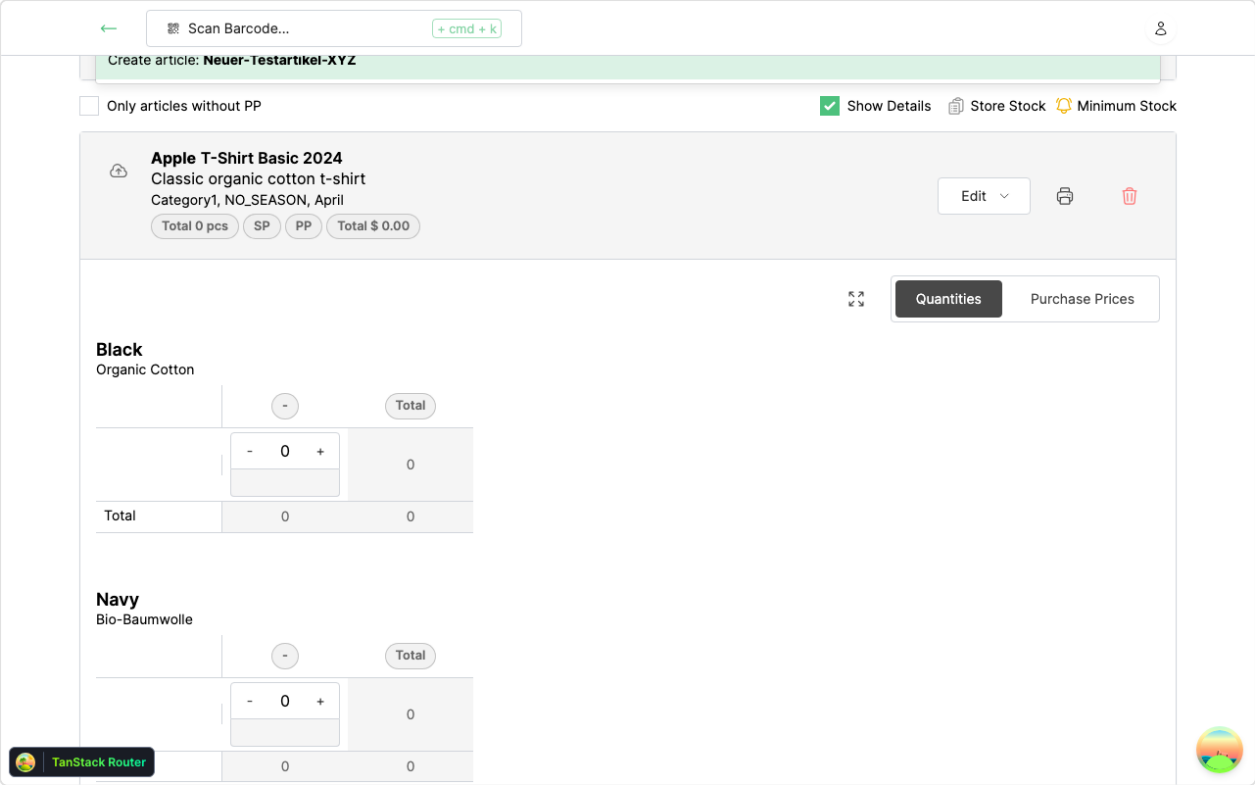
---

3. Create a new article from the order

If an article does not yet exist in the system, you can create it directly from the order.

1. Type the name of the new article in the **Add a model** field.
2. Click **Create article: [article name]**.

The system opens the article form. Supplier, season, collection, and currency are automatically carried over from the order.



Create a new article directly from the order.

1. Fill in the remaining article details (brand, category, prices, variants).
2. Click **Save**.

The system creates the article and automatically adds it as a position to the order. You return to the order overview where you can enter the order quantities.

> **Note:** For the complete article creation guide, see Creating Articles in the Admin App.

---

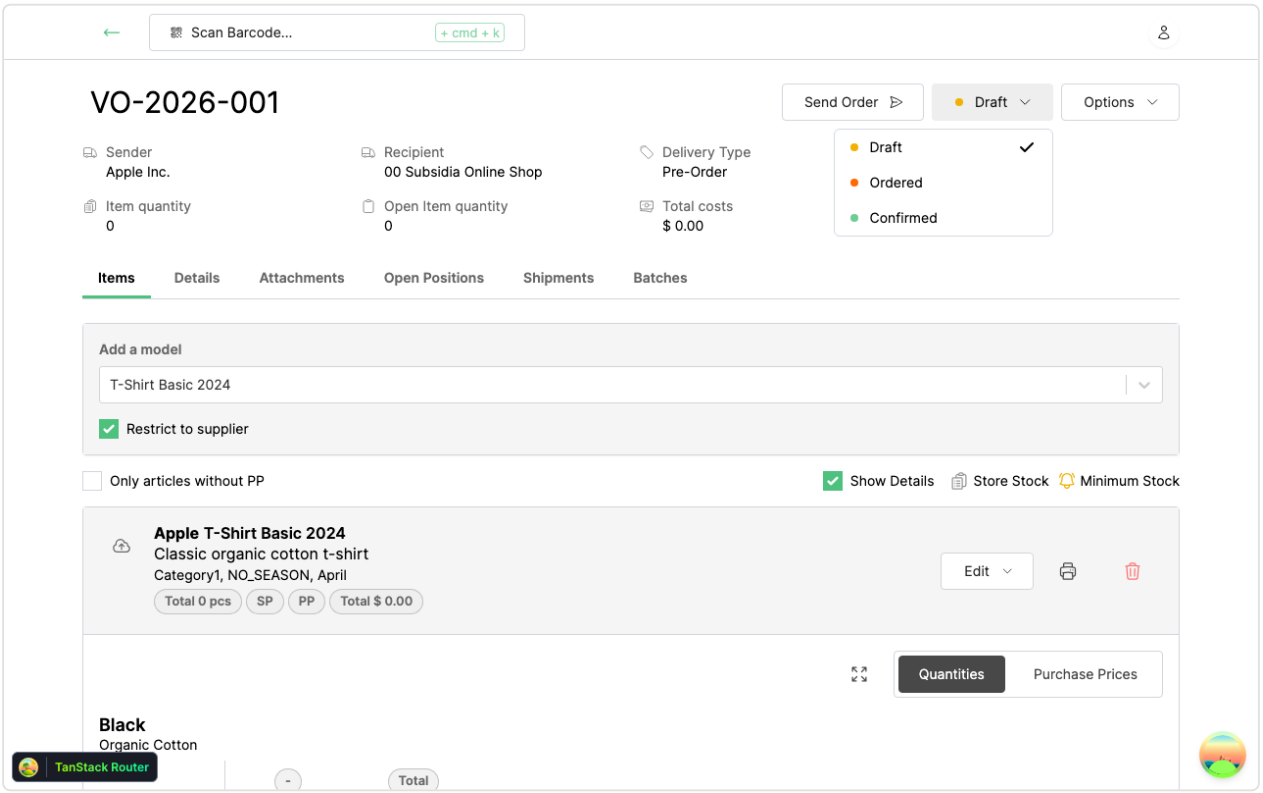
4. Change the order status

The order status controls which actions are available.

Status	Meaning
Draft	Order is being edited. Articles can be added and removed.
Ordered	Order has been placed. PDF download and sending are available.
Confirmed	Order is confirmed by the supplier. Open quantities can be cancelled.

Change the status

1. Open the order.
2. Click the current status in the top right (e.g., **Draft**).
3. Select the desired new status.



Change order status via the dropdown selector.

Edit a confirmed order

To edit a confirmed or ordered order:

1. Set the status back to **Draft**.
2. Edit the order as needed.
3. Set the status back to **Ordered** or **Confirmed**.

> **Note:** Orders can be switched between **Draft**, **Ordered**, and **Confirmed** at any time.

5. Send the order to a contact

You can send the order directly from the Admin App via email to a brand representative.

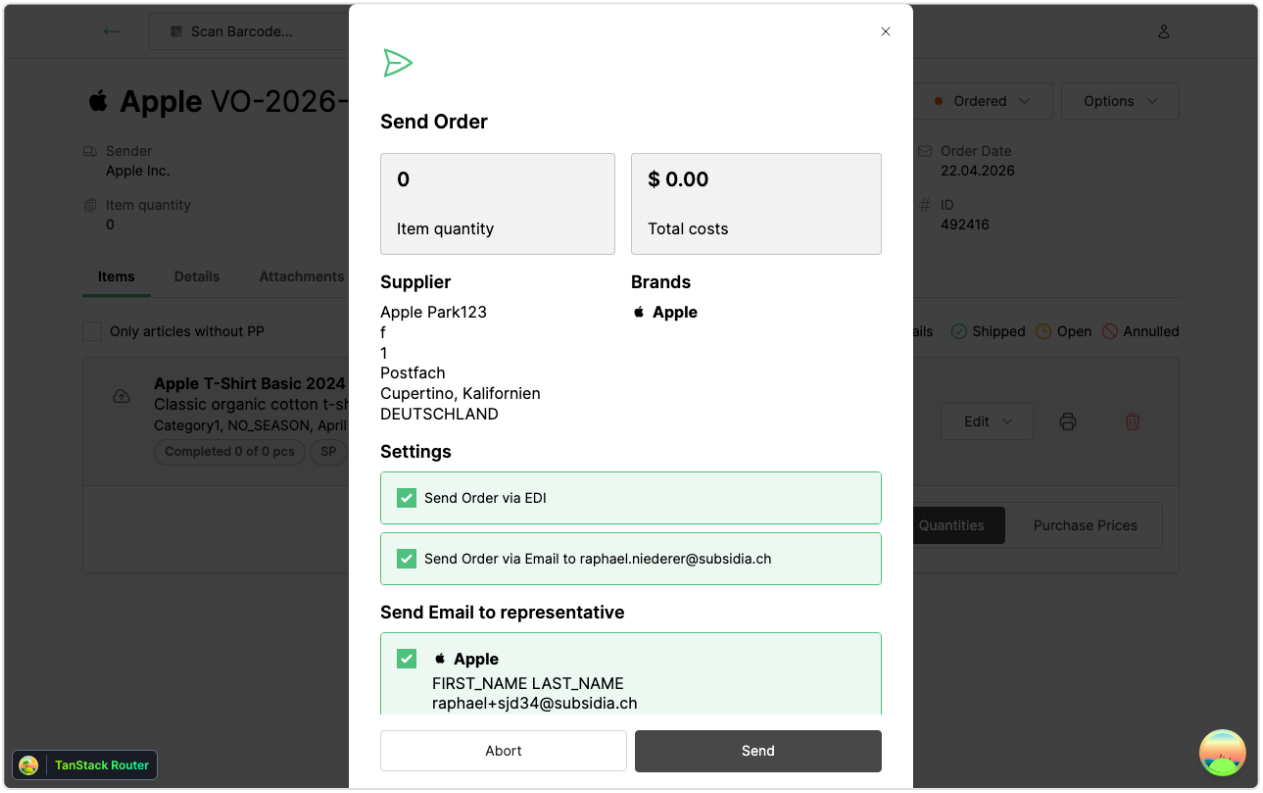
Prerequisite

The representative must have been invited via **Settings > My Brands** and must have accepted the invitation.

Send the order

1. Open the order and set the status to **Ordered**.
2. Click **Send Order** in the top right.

The system opens a window with a summary of the order.



Send order via email to brand representative.

1. Select the desired **representative** from the list.
2. Deactivate the **Send Order via EDI** checkbox if the supplier is not EDI-enabled.
3. Click **Send**.

The system sends the order and sets the status to **Sent**.

> **Note:** If no representative is set up for a brand, you can enter an email address directly in the send window and invite the representative.

Additional options

The **Options** button in the top right provides the following actions:

Action	Available from status
PDF (Table) — Download order as PDF	Ordered
PDF (List) — Download order as list	Ordered
Print Summary — Print order overview	All
Print Labels — Print article labels	All
Copy — Use order as template for a new order	All
Assign Season — Assign season retroactively	All
Assign Collection — Assign collection retroactively	All
Delete — Delete the order	Draft, Ordered
Cancel Open Item quantity — Cancel remaining open quantities	Confirmed

---

Frequently asked questions

Can I still edit a confirmed order? Yes. Set the status back to **Draft**, edit the order, and change the status back afterwards.

Why can I not add articles? The **Add a model** field is only visible when the status is **Draft**. Set the order back to **Draft**.

Can I create an article that does not yet exist in the system? Yes. Type the article name in the **Add a model** field and click **Create article**. The system carries over supplier, season, and collection automatically from the order.

What happens when sending to a contact? The system sends an email with the order details to the selected representative. The order status changes to **Sent**.

Minimum Stock and Order Proposals in the Admin App

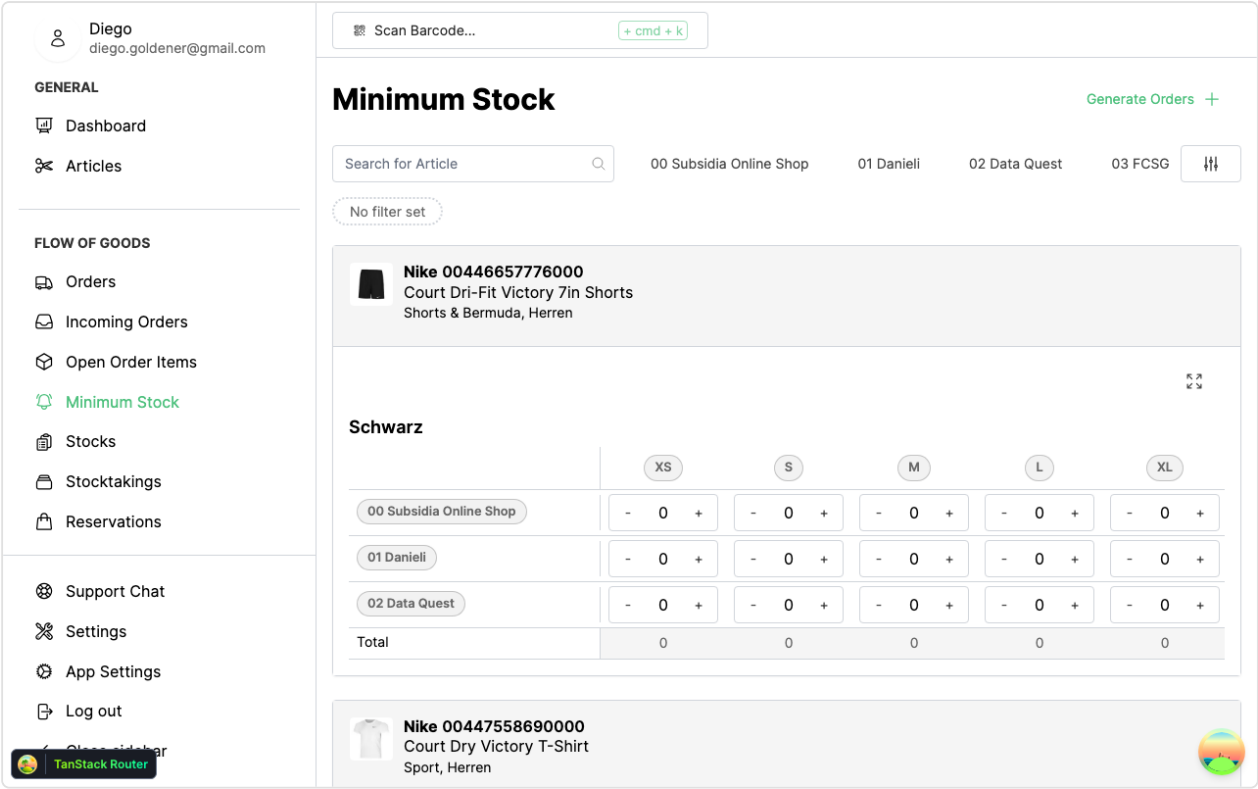
You set minimum stock levels per article and store and generate order proposals automatically to replenish inventory.

Prerequisites

- Access to the **Admin App**
- Permission for the **Minimum Stock** section
- **L-Package** is activated (NOS/Reass feature)

1. Set minimum stock

1. Open the **Admin App**.
2. Click **Minimum Stock** in the sidebar.
3. Select the desired article.
4. Click **Set Minimum Stock**.



Minimum stock list with articles and stores.

1. Select the **stores** for which the minimum stock should apply.
2. Click **Add to Minimum Stock**.
3. Enter the **minimum quantities** per store.

The minimum stock is saved.

---

2. Generate order proposal

1. Open the **Minimum Stock** section.
2. Click **Generate Order**.
3. Select the **store** and **supplier**.
4. Click **Show Preview** to review the proposal.
5. Click **Generate Orders**.

The system automatically creates orders based on the differences between current stock and minimum stock levels.

Frequently asked questions

Which packages include this feature? The NOS/Reass feature is included in the L-Package.

Can I set minimum stock for multiple stores at once? Yes. When setting the minimum stock, you can select multiple stores simultaneously.

Conducting a Stocktaking in the Admin App

You create a stocktaking, start the count, review the differences, and confirm the stocktaking. The system posts the stock corrections automatically.

Prerequisites

- Access to the **Admin App**
- Permission for the **Stocktakings** section
- All open **goods receipts** and **delivery notes** for the affected store are completed or cancelled

Overview

The process in four steps:

1. **Prepare the stocktaking** — You create a new stocktaking and select the store.
2. **Start the stocktaking** — You start the count. Participants can join via a shared link.
3. **Review differences** — You check the deviations between expected and actual stock and adjust quantities manually if needed.
4. **Confirm the stocktaking** — You confirm the stocktaking. The system posts the differences.

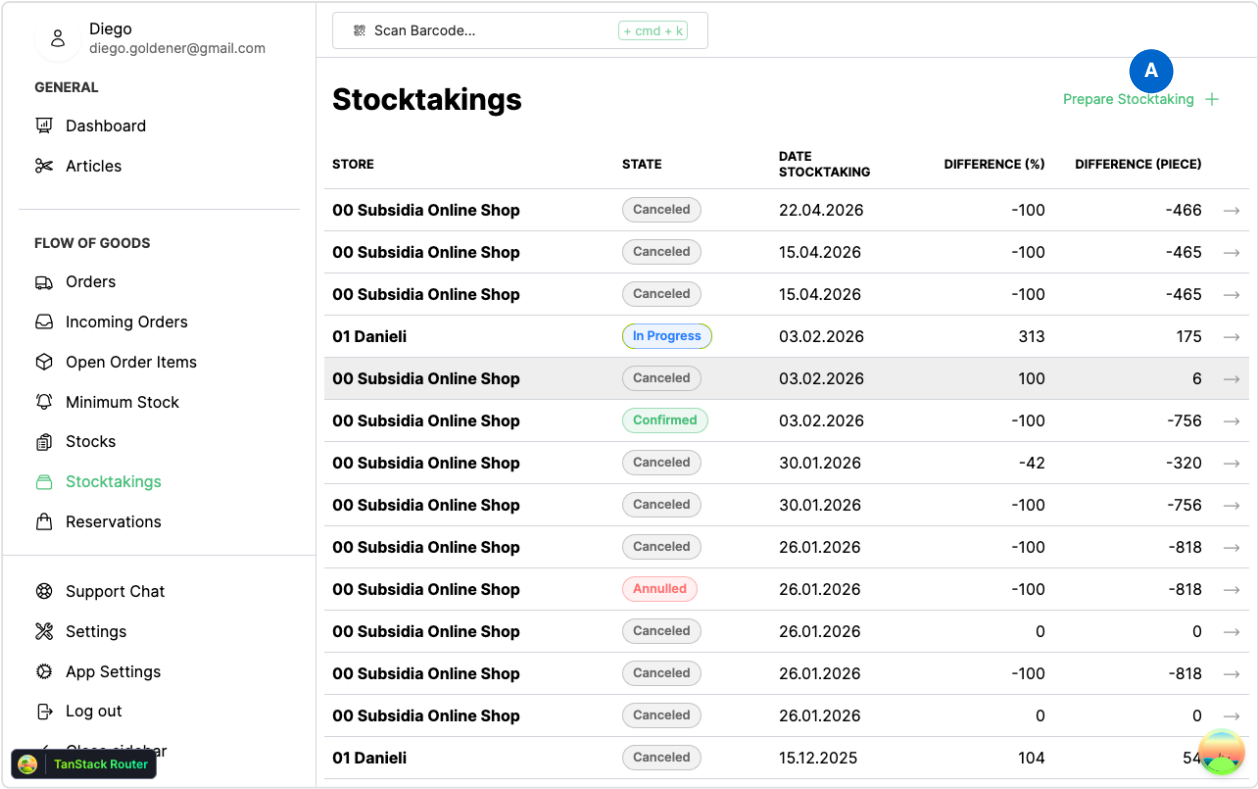
1. Prepare the stocktaking

Before the stocktaking, all open stock movements must be completed:

- Complete all **goods receipts** with the status "In Progress".
- Cancel or complete all prepared **delivery notes**.

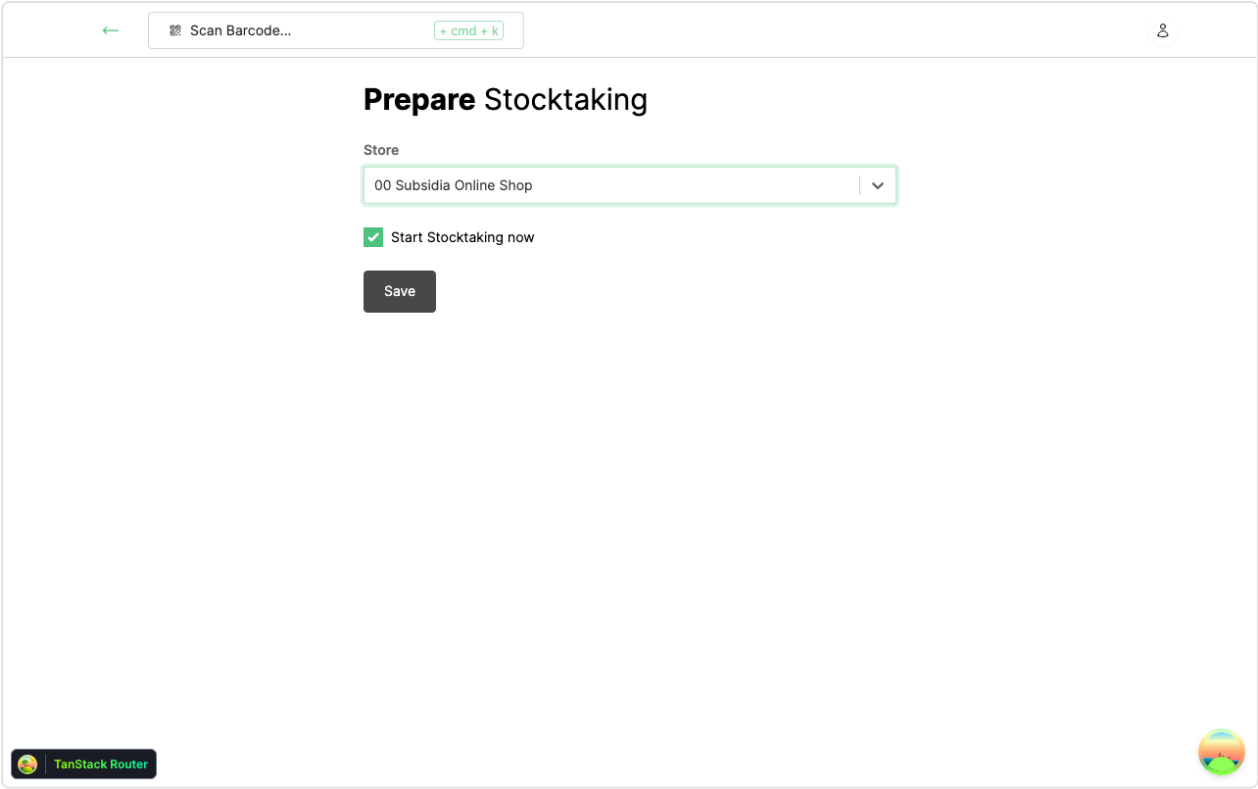
Then create the stocktaking:

1. Open the **Admin App**.
2. Click **Stocktakings** in the sidebar.
3. Click **Prepare Stocktaking** in the top right.



A *Prepare Stocktaking*

1. Select the **Store**.
2. The **Start Stocktaking now** checkbox is enabled by default. Disable it to set a later date.
3. Click **Save**.



Select store and start time.

The system creates the stocktaking and redirects you to the overview.

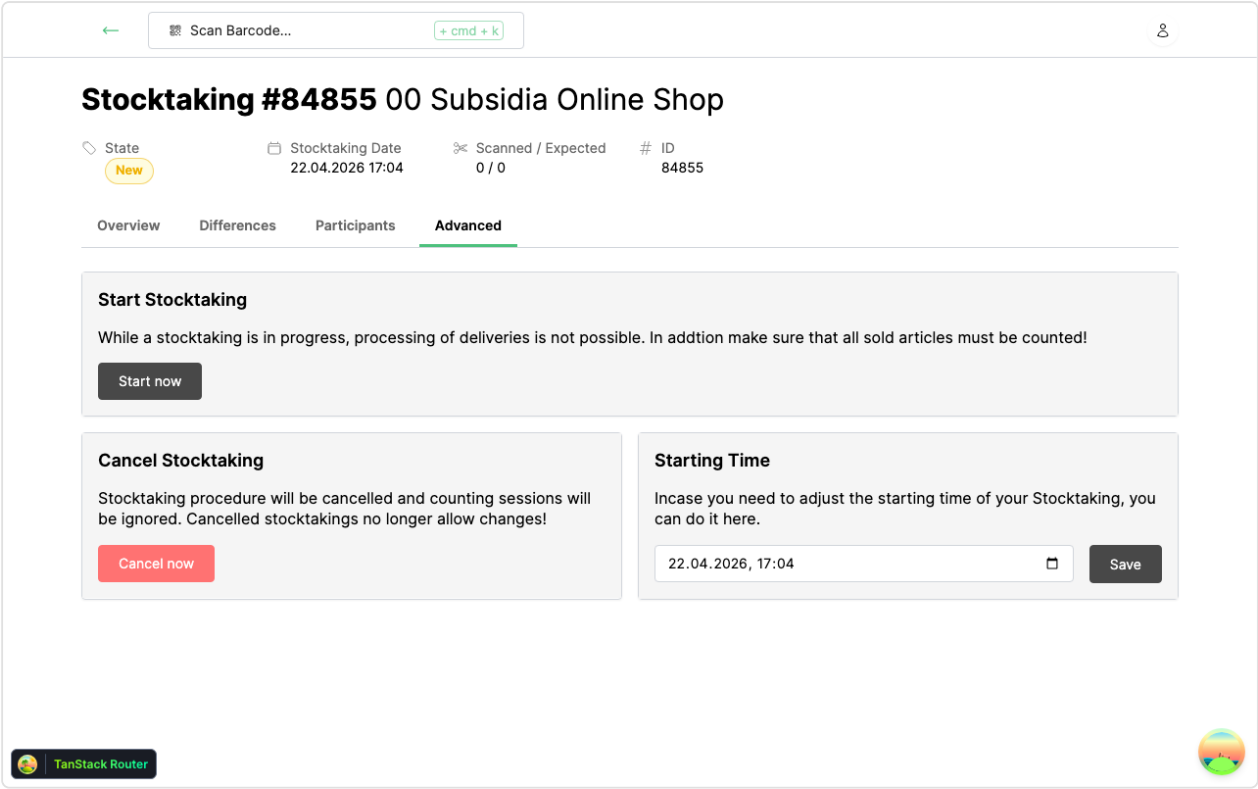
> **Important:** Once the stocktaking starts, no goods receipts can be processed. All articles sold during the stocktaking must be counted.

---

2. Start the stocktaking

If the stocktaking was not started immediately (checkbox disabled), start it manually:

1. Open the stocktaking.
2. Switch to the **Advanced** tab.
3. Click **Start now**.

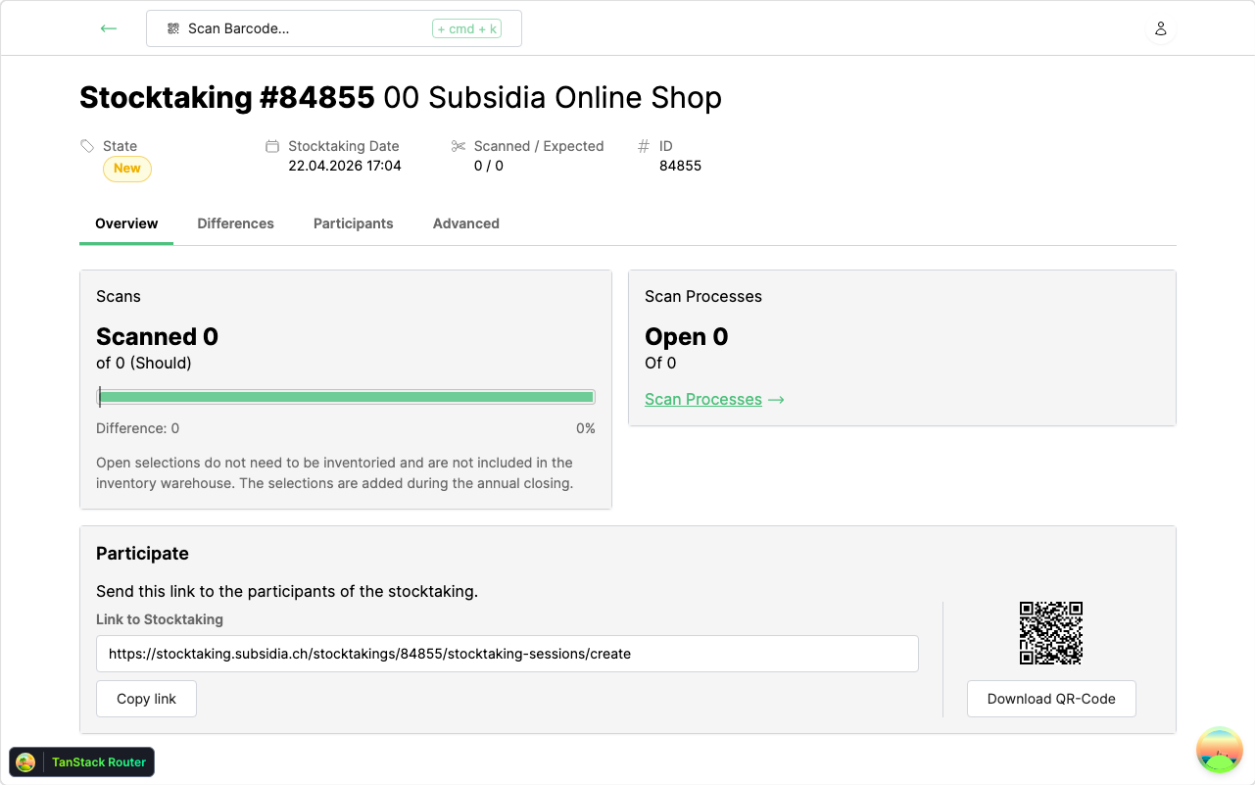


Start stocktaking on the Advanced tab.

The system sets the status to **In Progress**.

Invite participants

On the **Overview** tab, you find a link that you can send to participants. Participants use the Stocktaking App to scan articles and submit their counts.



Overview with progress and participation link.

The overview shows the current progress:

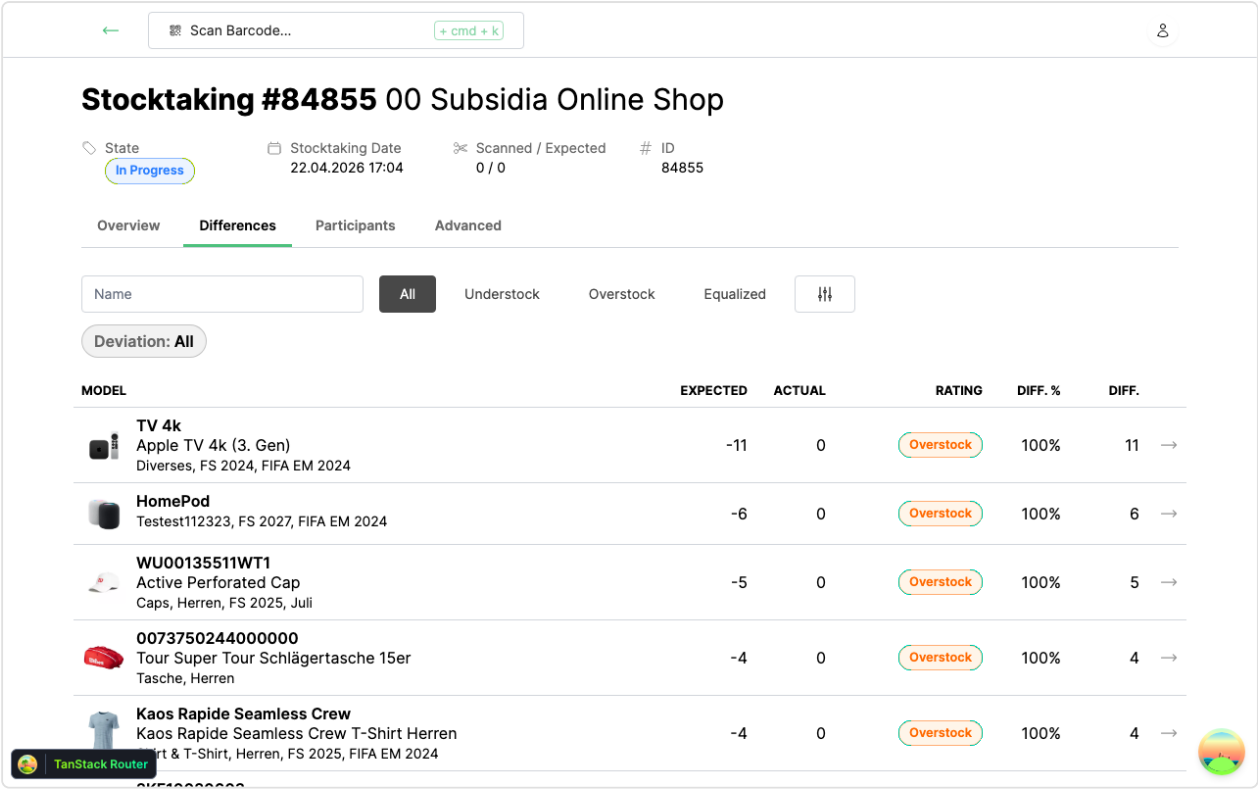
Metric	Description
Scanned	Number of articles scanned so far
Should	Expected stock according to the system
Manually recorded	Manually adjusted quantities
Difference	Deviation between expected and actual stock

---

3. Review differences

Once participants have submitted their counts, review the deviations.

1. Open the stocktaking.
2. Switch to the **Differences** tab.



Differences list with expected and actual quantities.

The list shows all articles with the columns **Expected**, **Actual**, **Rating**, **Diff. %**, and **Diff.**.

Filter

Use the filter options to search for specific deviations:

- **Understock** — fewer counted than expected
- **Overstock** — more counted than expected
- **Equalized** — expected and actual stock match

Adjust quantities manually

1. Click a row in the differences list.
2. The system shows the individual article variants (color, size, material) with their quantities.
3. Adjust the **actual quantity** and the system saves the change automatically.

Screenshot pending: Article detail with variants and quantity adjustment

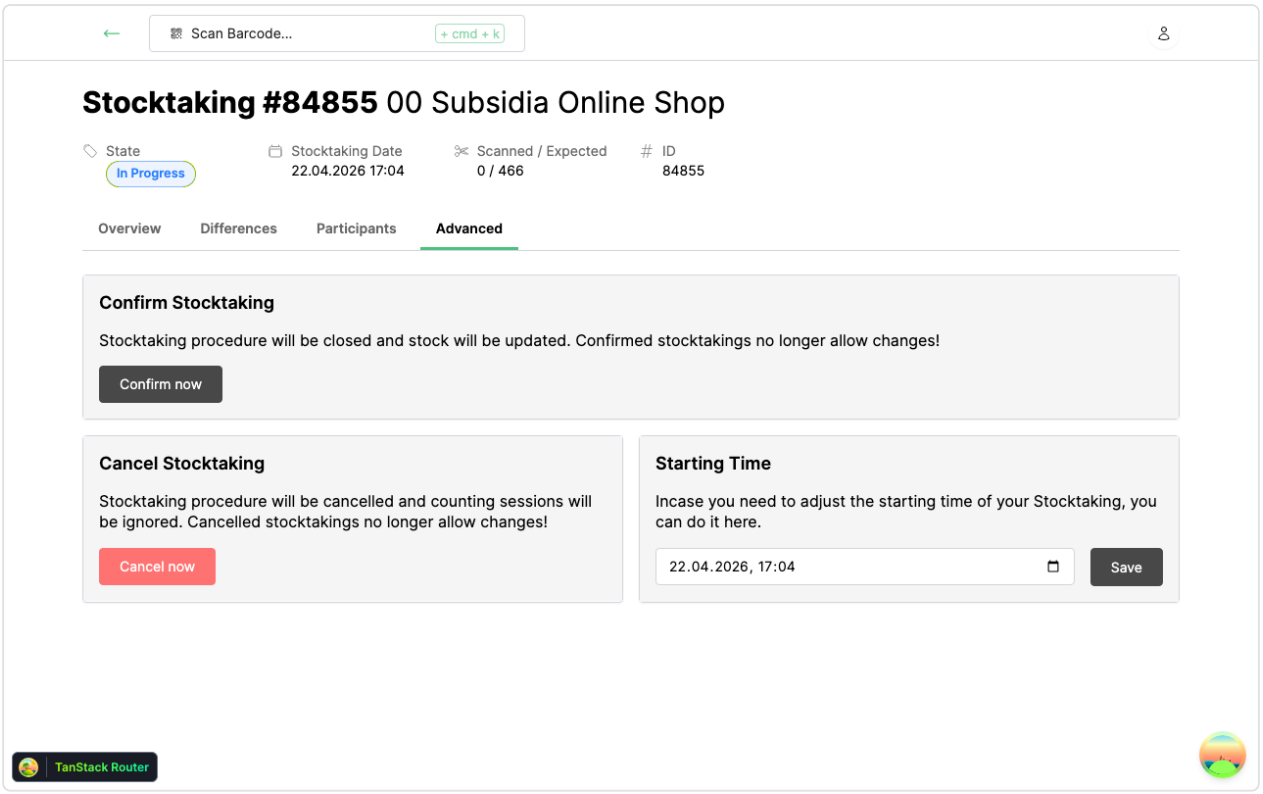
> **Note:** Manual adjustments are only possible when the status is **In Progress**.

---

4. Confirm the stocktaking

After all differences have been reviewed and all scan processes are completed:

1. Switch to the **Advanced** tab.
2. Click **Confirm now**.



Confirm stocktaking on the Advanced tab.

1. Confirm in the dialog.

The system sets the status to **Confirmed** and posts the differences. A confirmed stocktaking no longer allows changes.

> **Important:** The **Confirm now** button only appears when all participant scan processes are completed.

Cancel or annul a stocktaking

Action	Available in status	Effect
Cancel now	New, In Progress	Counts are ignored. No differences posted.
Annul now	Confirmed	Posted differences are reverted.

Both actions are available on the **Advanced** tab.

> **Important:** Cancelling and annulling cannot be undone.

Frequently asked questions

Why does the "Confirm now" button not appear? All participant scan processes must be completed. Check the **Participants** tab for any open scan processes.

Can I correct differences after confirmation? No. After confirmation, no changes are possible. You can annul the stocktaking and start a new one.

Can goods receipts be processed during a stocktaking? No. Goods receipts are blocked from the start of the stocktaking until it is confirmed or cancelled.

Setting Up QR Code Customer Registration

Your customers can register independently via an online form. You configure once which data is collected, then share the generated QR code — the system handles the rest.

Prerequisites

- Access to the **Admin App**
- Permission for the **Settings** section

Overview

The process in three steps:

1. **Configure the form** — You define which fields the customer fills in.
2. **Share the QR code** — You print the QR code or share it digitally.
3. **Customer registers** — The customer scans the QR code, fills in the form, and receives a registration code.

How to process the registration code afterwards in the POS or Office is described in the guide Completing New Customer Registration at the POS.

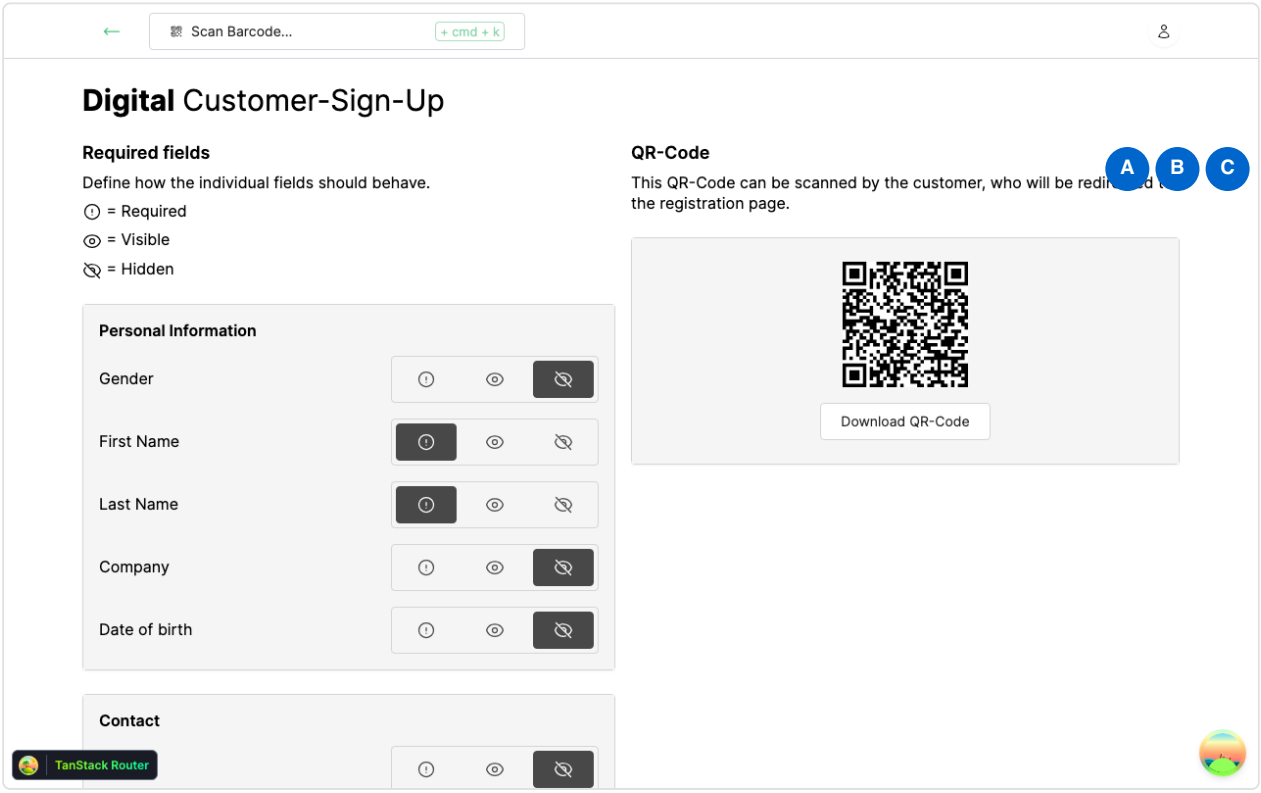
1. Configure the form

1. Open the **Admin App**.
2. Navigate to **Settings > More > Digital Customer-Sign-Up**.

On the left side, you see the field configuration. Each field has three possible states:

Symbol	Status	Meaning
!	Required	The customer must fill in this field.
Eye	Visible	The field is displayed but optional.

Symbol	Status	Meaning
Crossed-out eye	Hidden	The form does not show this field.



A Required — B Visible — C Hidden

1. Click the corresponding symbol on the desired field to change its status.

By default, only **First Name** and **Last Name** are set as required. All other fields — including gender, company, date of birth, email, phone, website, and all address fields — are hidden. Activate only the fields you need for your customer registration.

Adding a terms and conditions URL (optional)

In the **Terms and conditions** section, you can enter a URL to your terms and conditions. The registration form displays this to the customer as a link.

> **Note:** The URL must start with `https://` and contain a valid domain name (e.g., `https://www.myshop.ch/terms`).

2. Share the QR code

On the right side of the configuration page, the system automatically generates a **QR code**. This directs customers to the registration form.

Print this QR code or share it digitally.

You can use the QR code in the following ways:

- **Display in-store** — Print the QR code and place it at the checkout or in the entrance area.
- **Share digitally** — Include the QR code in newsletters, on your website, or in social media posts.

- **Show on customer screen** — Display the QR code on a screen in the store.

> **Important:** The QR code contains the field configuration directly in the URL. When you change the fields, the QR code on the configuration page updates automatically. However, previously printed or shared QR codes retain the old configuration — reprint the QR code after making changes.

---

3. Customer registers

Once a customer scans the QR code, the registration form opens in their browser. The form only shows the fields you configured as **Required** or **Visible**.

1. The customer scans the QR code with their smartphone.
2. The form opens in the browser.
3. The customer fills in the details and submits the form.
4. The system creates a **registration code** (barcode) that the customer can present in-store.

How your team processes the registration code in the POS or Office is described in the guide Completing New Customer Registration at the POS.

Frequently asked questions

Can I change the fields afterwards? Yes. Changes to the field configuration take effect immediately for new registrations. Reprint the QR code after making changes, as previously shared codes contain the old configuration.

Completing New Customer Registration at the POS

Here you learn how to scan a new customer's registration code in the POS or Office and create the customer record.

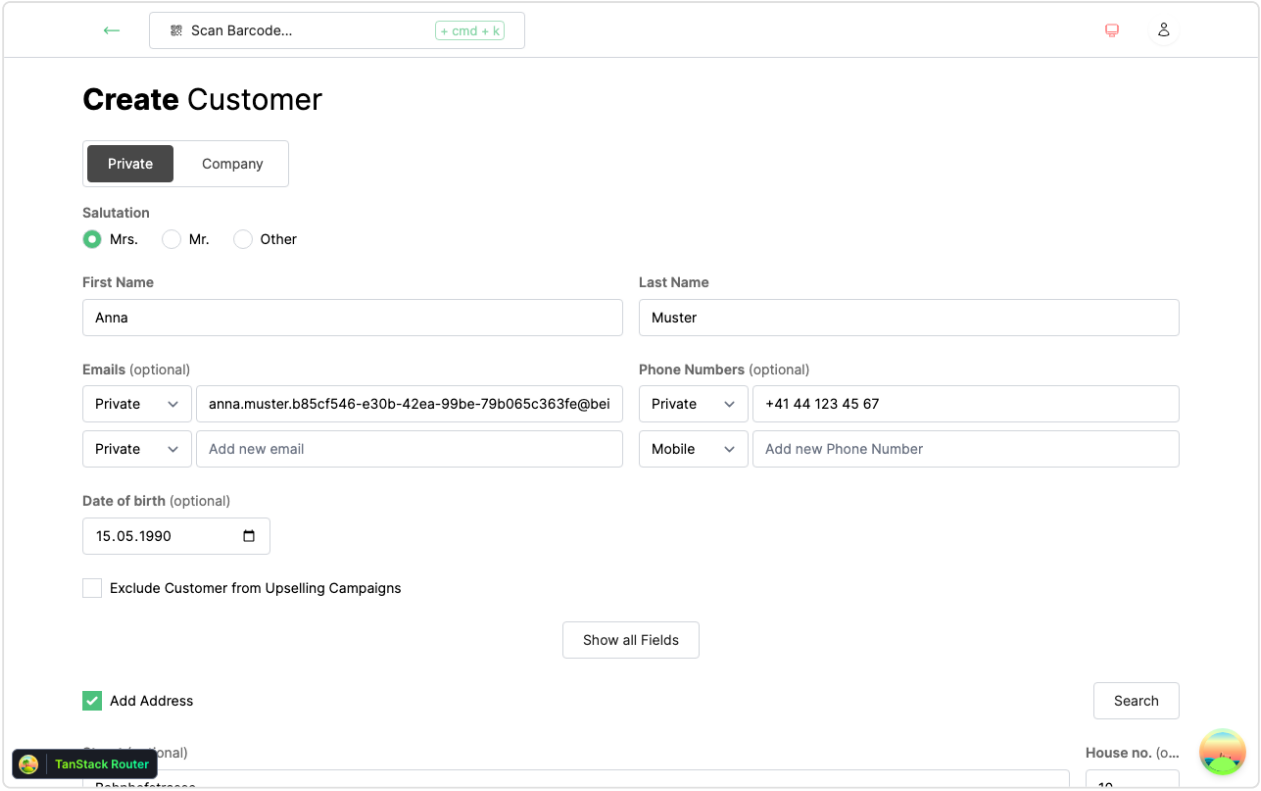
> If you have not yet set up the QR code for the registration form, read the guide Setting Up QR Code Customer Registration first.

Prerequisites

- Access to the **POS** or **Office**
- The customer has completed the registration form and received a **registration code**

Creating a customer via customer registration

1. In the **POS** or **Office**, open customer registration under **Customers > Create Customer**.
2. Scan the customer's **registration code** using the search bar or barcode scanner.
3. The system automatically transfers the customer data into the form.



The form is automatically populated with the registration data.

1. Review or complete the details as needed.
2. Click **Save**.

Creating a customer directly in a transaction

You can also scan the registration code during an ongoing sale:

1. Scan the registration code during an ongoing **transaction**.
2. The system automatically opens the customer registration form with the pre-filled data.
3. Review or complete the details.
4. Click **Save**.

The system assigns the new customer directly to the transaction.

Duplicate check

When the new customer's email address already exists in the system, the system automatically displays an overview of matching customers. You then have two options:

- **Select an existing customer** — The system links the existing customer to the transaction.
- **Register new customer** — Click **Register new customer** to create a new entry regardless.

Frequently asked questions

Which apps support scanning the registration code? The **POS** and the **Office** can process the registration code. In the **Admin App**, you only configure the setup.

Managing Discounts in the Admin App

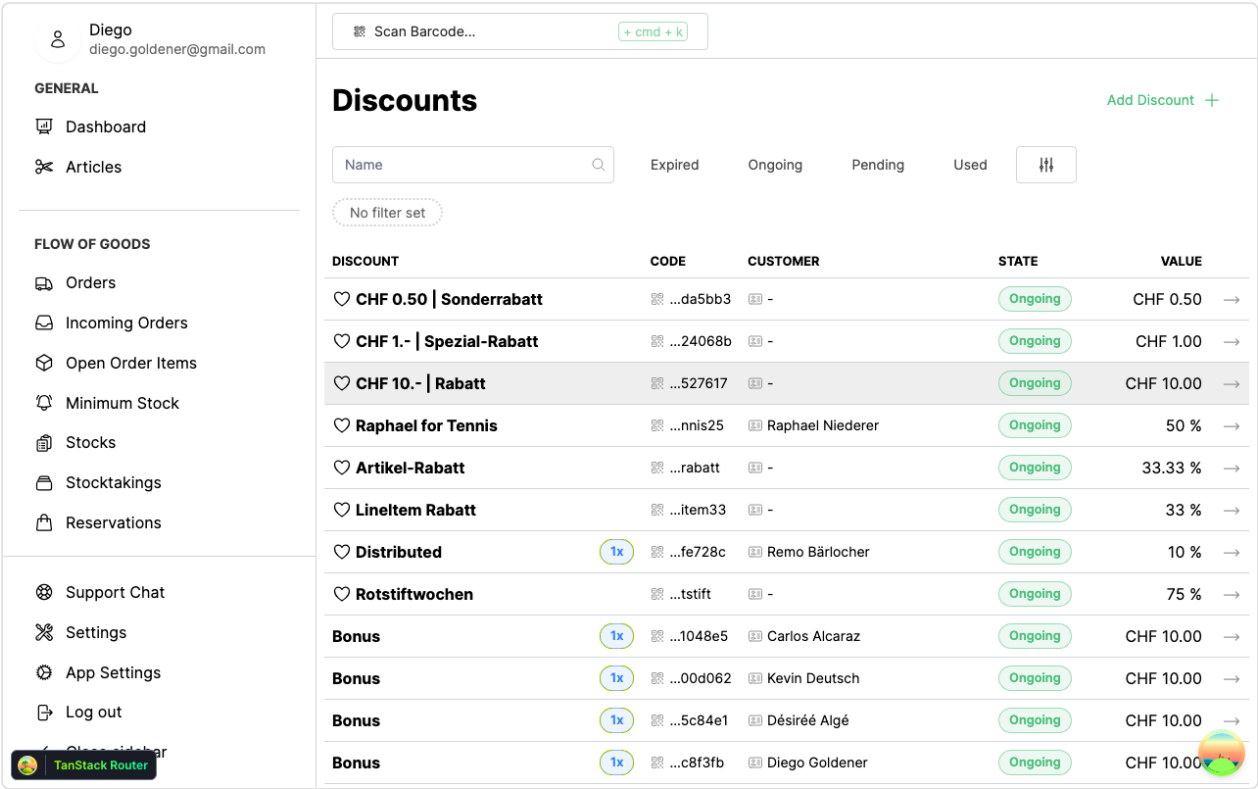
You create discounts with various types and restrictions and mark frequently used discounts as favorites.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Discounts** section

1. Create a new discount

1. Open the **Admin App**.
2. Click **Discounts** in the sidebar.
3. Click **Add Discount**.

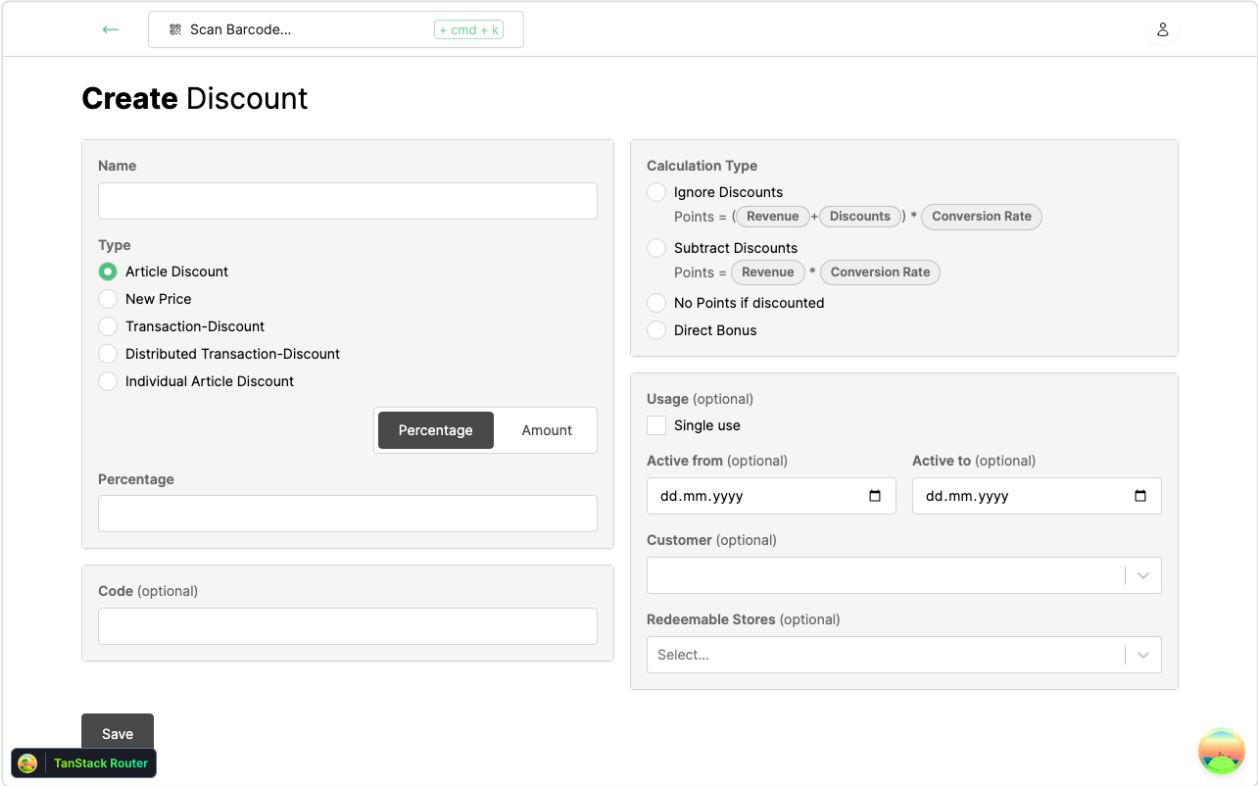


Discounts list with Add Discount button.

1. Fill in the following fields:

Field	Description
Name	Designation of the discount.
Type	Type of discount (see discount types below).
Percentage or **Amount**	Discount value as percentage or fixed amount.
Code	Optional barcode for the discount.
Single use	When enabled, the discount can only be redeemed once.
Active from / to	Optional validity period.
Customer	Optional assignment to a specific customer.
Redeemable Stores	Optional restriction to specific stores.

1. Click **Save**.



Discount form with type and restrictions.

2. Discount types

Type	Description
Article Discount	Applied to the last scanned article. Repeatable per article.
New Price	Sets a new price on the last scanned article.
Transaction Discount	Applied at the end of the transaction. Not distributed across individual items.
Distributed Transaction Discount	Distributed across all items. Adjusts automatically when new articles are added.
Individual Article Discount	Applied once to all items. Can be adjusted per article afterwards.

---

3. Mark a discount as favorite

Favorites appear in a separate list at the POS for quick access.

1. Open **Discounts**.
2. Click the desired discount.
3. Enable the **Favorite** checkbox.
4. Click **Save**.

> **Note:** Pay attention to the discount type when marking favorites. Different types appear in different lists at the POS.

Frequently asked questions

Can I print a discount as a QR code? Yes. Create a discount with a code and print it as a QR code label via the label printer.

Can I limit a discount to a time period? Yes. Fill in the **Active from** and **Active to** fields.

Managing Gift Cards in the Admin App

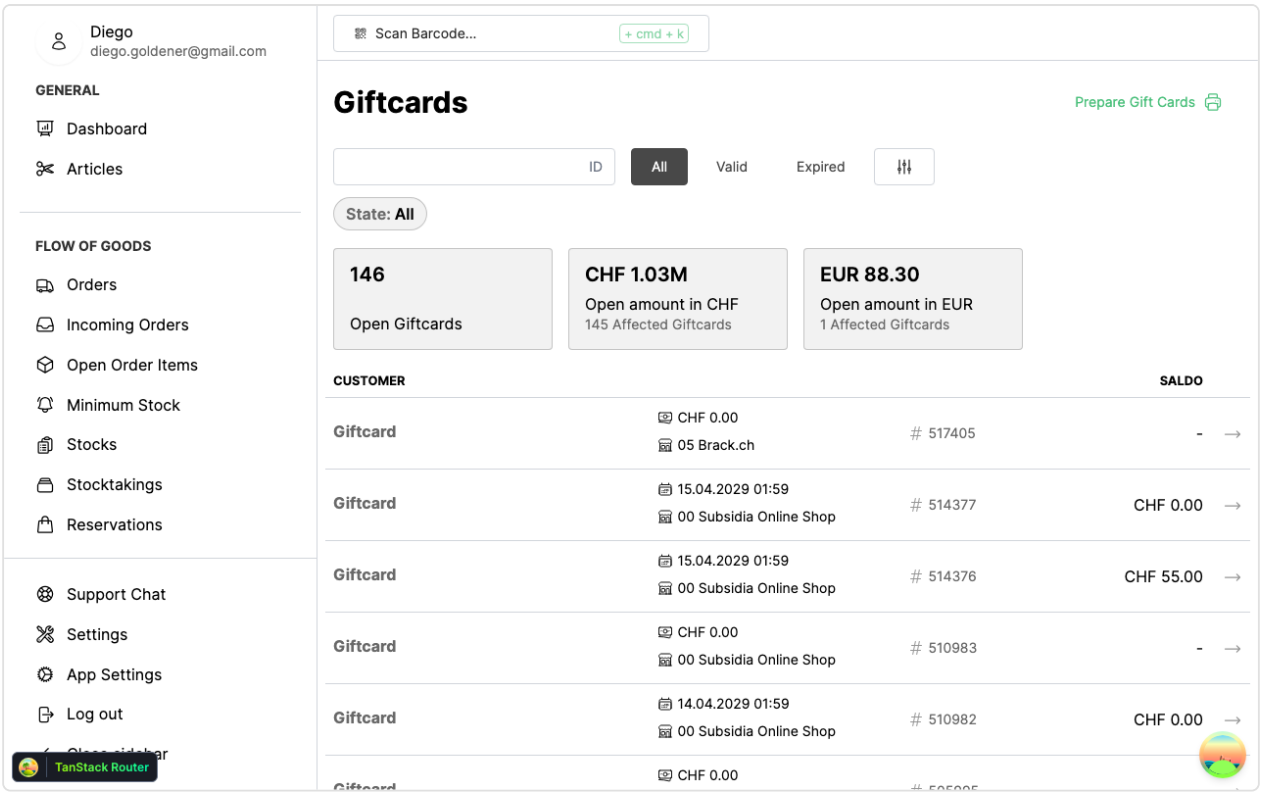
You block gift cards by setting a past expiry date.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Gift Cards** section

Block a gift card

1. Open the **Admin App**.
2. Click **Gift Cards** in the sidebar.
3. Search for the desired gift card.
4. Click the gift card.



Gift cards list.

1. Click **Change Date** in the top right.
2. Enter a **past date**.
3. Click **Save**.

The gift card is blocked and can no longer be redeemed.

> **Important:** The blocking date cannot be earlier than the gift card's last transaction.

Frequently asked questions

Can I unblock a blocked gift card? Yes. Set the expiry date to a future date.

Managing Seasons and Collections in the Admin App

You configure seasons, create collections, and link them to suppliers. These assignments simplify article creation and analytics reporting.

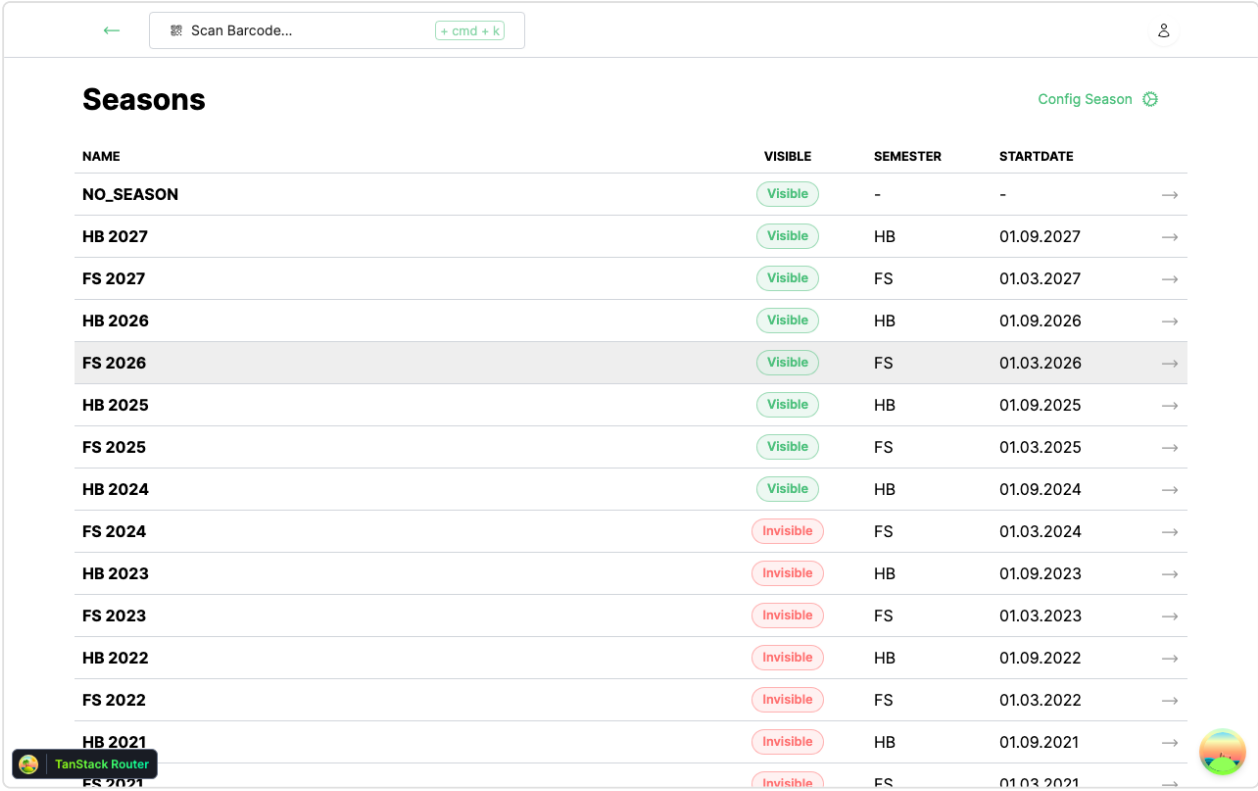
Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Settings** section

1. Configure seasons

Seasons are created automatically by the system based on your configuration settings.

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **Seasons**.
4. Click **Config Season**.



Seasons list with configuration.

1. Define:
2. From which **year** seasons should be created automatically
3. Which **month** starts the first semester
4. **Short names** for both semesters
5. How long seasons remain visible in the selection
6. Click **Save**.

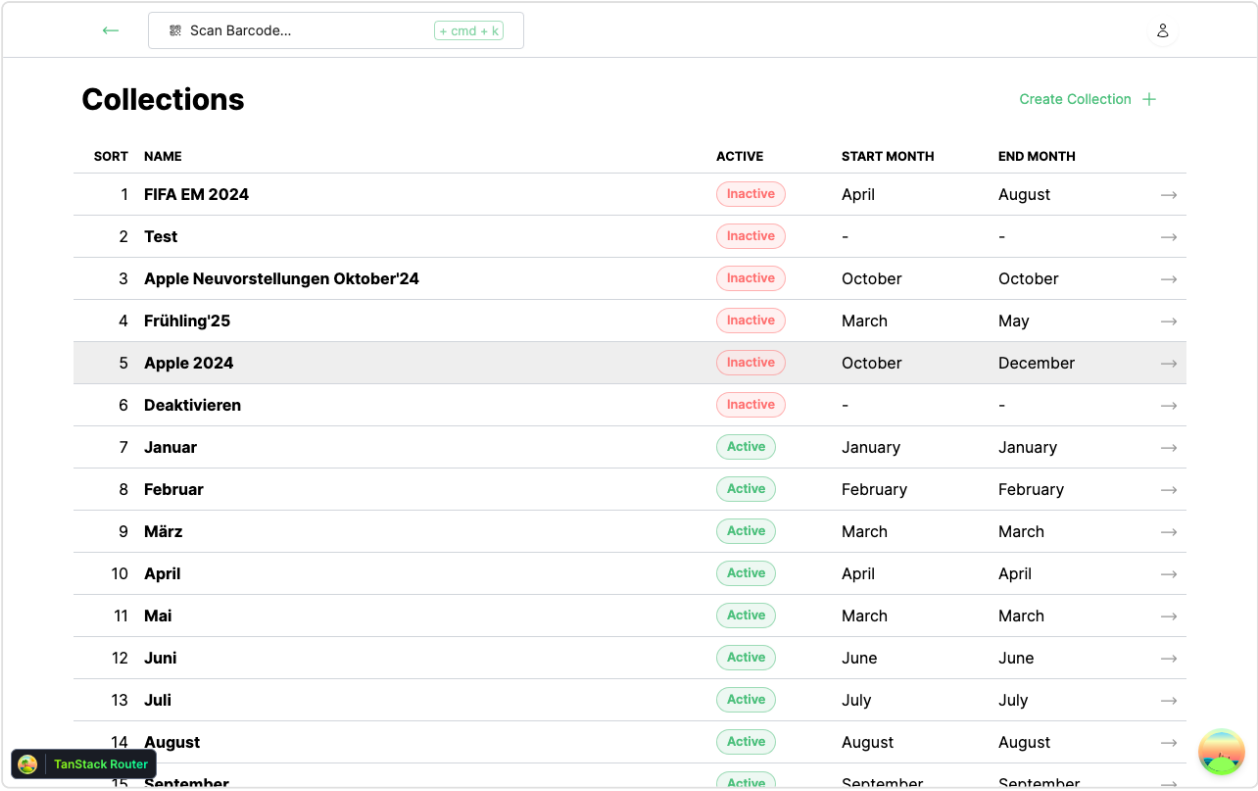
The system creates new seasons automatically and hides expired ones.

> **Note:** To remove the season from a label, open the season and enter a space in the **Print Text** field.

---

2. Create collections

1. Click **Settings** in the sidebar.
2. Click **Collections**.
3. Click **Create Collection**.



Collections list with create button.

1. Fill in the fields:

Field	Description
Name	Name of the collection.
Print Text	Text displayed on the label.
Start Month	Start of the delivery period.
End Month	End of the delivery period.

1. Click **Save**.

---

3. Link collection to supplier

1. Open the desired collection.
2. Switch to the **Suppliers** tab.
3. Add the suppliers that deliver this collection.

When creating articles and orders, the system automatically suggests the matching collection based on the supplier and delivery period.

Season types

The system distinguishes three season types:

Type	Description	Usage
Article Season	The season assigned to an article.	Article management. Not recommended for Analytics filters.
Order Season	The season assigned to an order.	Analytics reporting in the goods flow area.
Receiving Season	Automatically assigned based on the delivery date.	Automatic assignment when no order exists.

> **Note:** For Analytics reporting, use the **Order Season** or **Receiving Season**, as the Article Season may be incomplete.

Frequently asked questions

Are seasons created automatically? Yes. The system creates seasons automatically based on your configuration.

Can I edit collections afterwards? Yes. Open the collection and adjust the fields.

Configuring Suppliers and Brands in the Admin App

You configure suppliers and brands, link them together, and set up delivery and payment terms. This configuration is a prerequisite for article creation and order placement.

Prerequisites

- Access to the **Admin App** with **Admin rights** (not possible with a Team Account)
- Permission for the **Settings** section

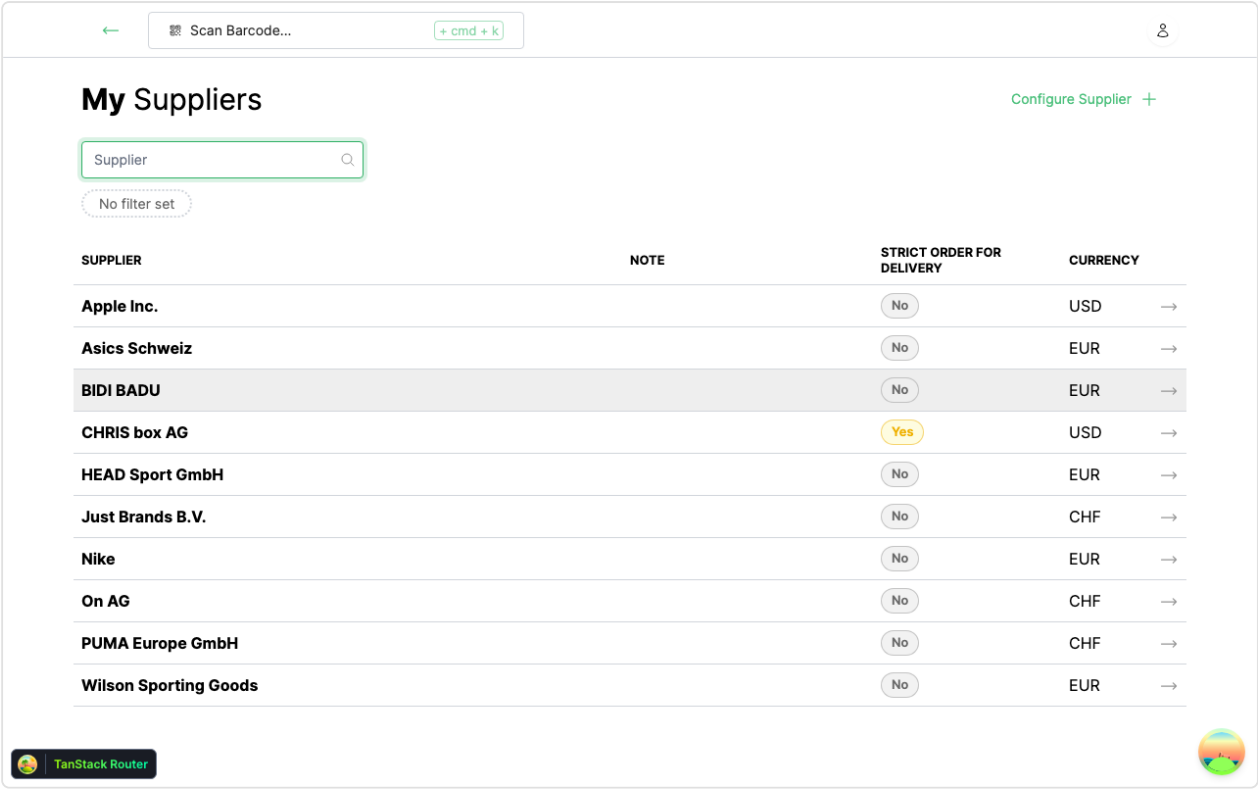
Overview

1. **Configure a supplier** — You add a supplier with address and currency.
2. **Configure a brand** — You add a brand.
3. **Link brand to supplier** — You define which supplier delivers which brand and configure pricing factors.
4. **Set delivery and payment terms** — You configure delivery conditions, payment deadlines, and early payment discounts.
5. **Invite a contact** — You invite a brand representative via email to send orders directly.

---

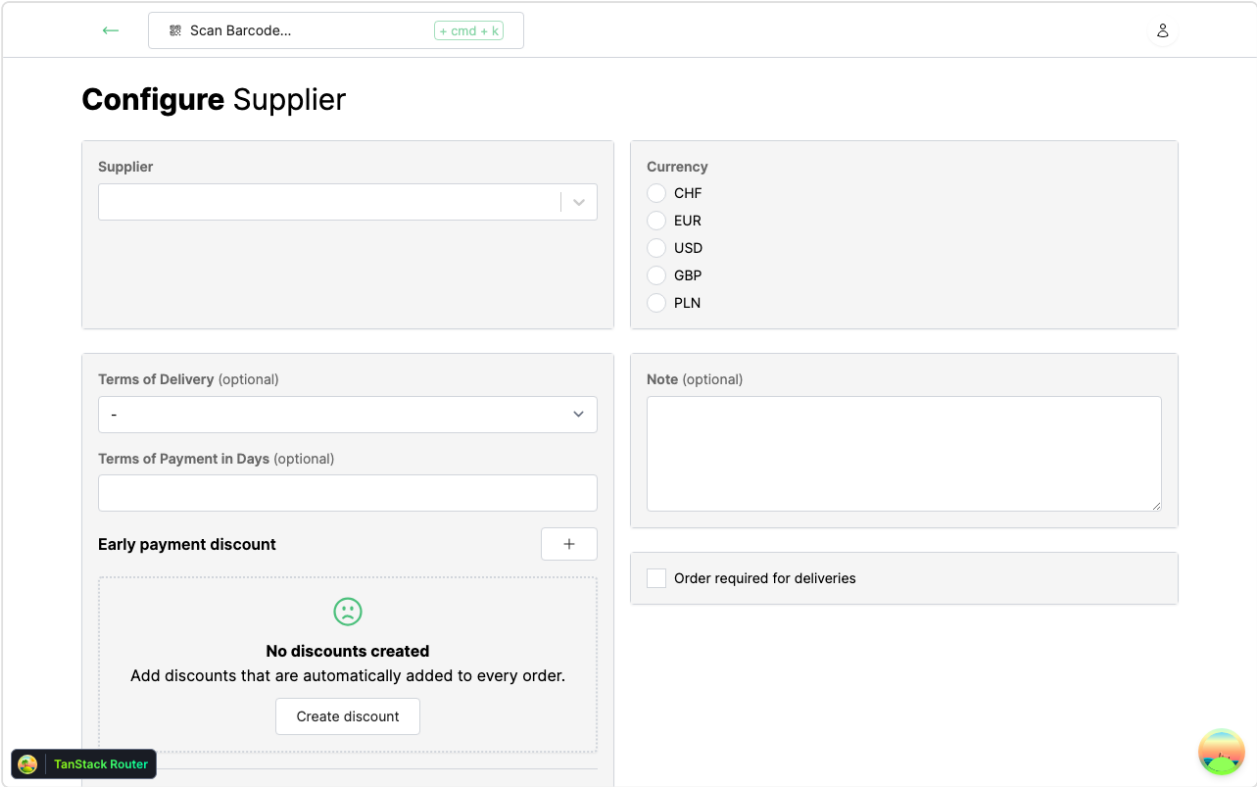
1. Configure a supplier

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **My Suppliers**.
4. Click **Configure Supplier** in the top right.



Supplier list under Settings > My Suppliers.

1. Search for the desired supplier.
2. Select the appropriate **order address** and **currency**.
3. Click **Save**.



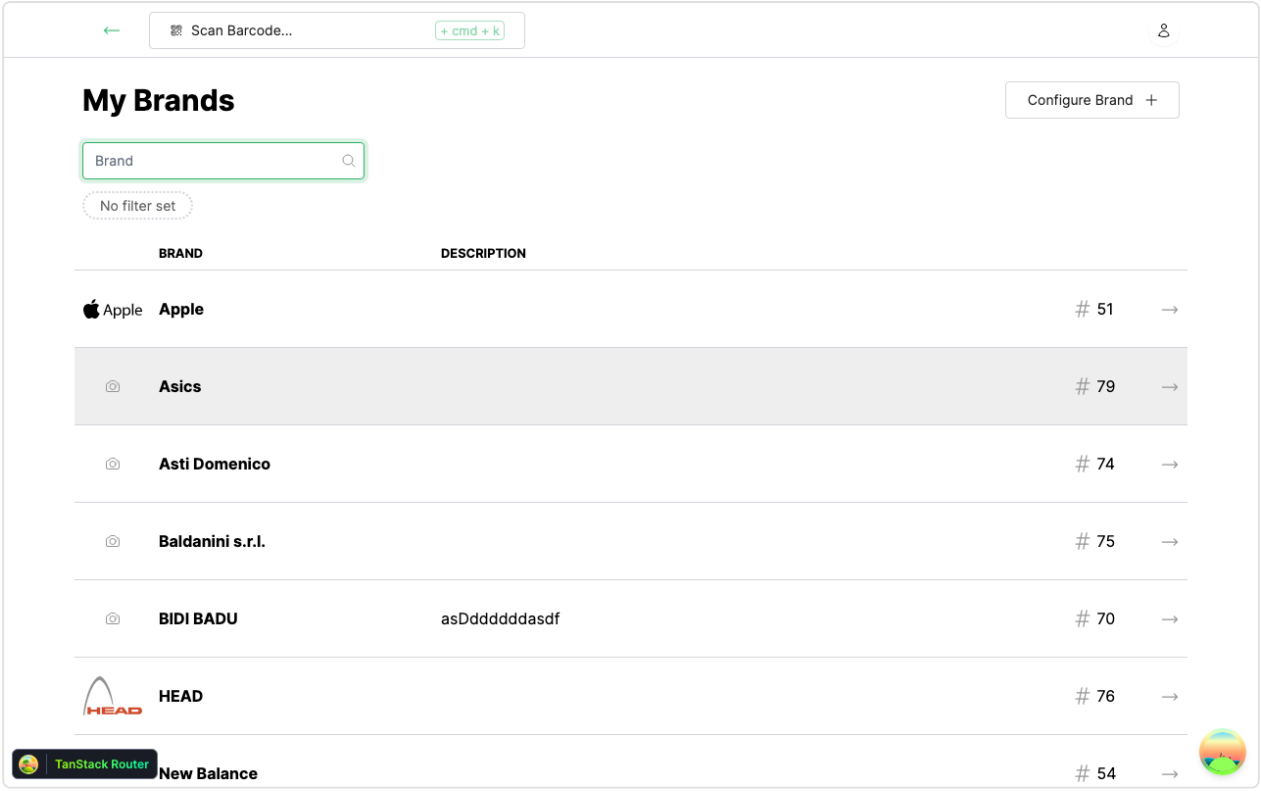
Configure new supplier with address and currency.

> **Note:** If the supplier does not appear in the search, they must first be registered with Subsidia. Use the form at Register new supplier.

---

2. Configure a brand

1. Click **Settings** in the sidebar.
2. Click **My Brands**.
3. Click **Configure Brand**.



Brand list under Settings > My Brands.

1. Search for the desired brand.
2. Click **Save**.

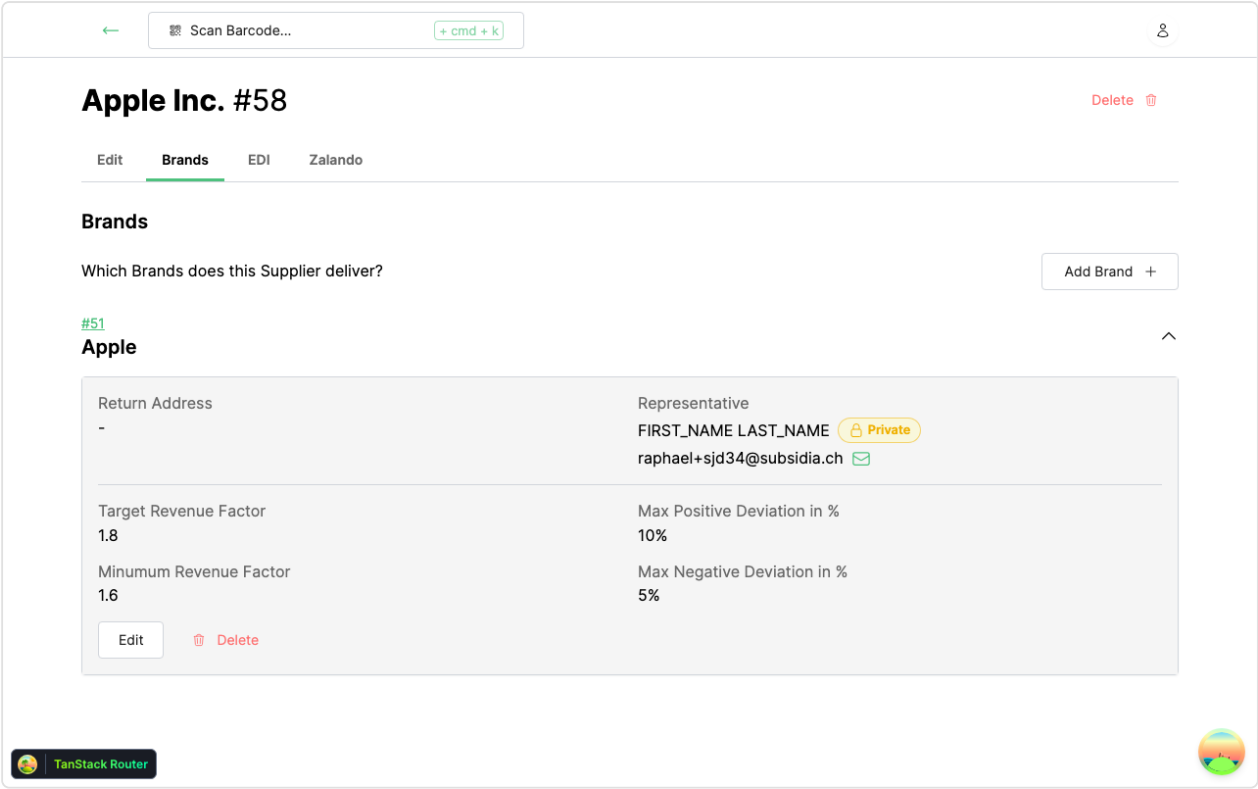
---

3. Link brand to supplier

The link defines which supplier delivers which brand. When creating articles, the system automatically selects the matching supplier when you choose the brand.

Via the supplier view

1. Open **Settings > My Suppliers**.
2. Click the desired supplier.
3. Switch to the **Brands** tab.
4. Click **Add Brand**.
5. Select the brand and configure the **pricing factors** (revenue factor, minimum factor, maximum deviation).
6. Click **Save**.



Link brands to supplier and configure price factors.

Automatic price calculation

When you configure pricing factors, the system automatically calculates the sales price based on the purchase price and the configured factor when creating an article.

---

4. Set delivery and payment terms

1. Open **Settings > My Suppliers**.
2. Click the desired supplier.
3. On the **Edit** tab, you find the fields for terms:

Field	Description
Delivery terms	Type of delivery (dropdown).
Terms of payment in days	Number of days until payment is due.

Field	Description
Discount	Percentage discount for early payment (via **Add discount**).

1. Click **Save**.

---

5. Order-only goods receipt

You can require that goods receipts for a supplier are only possible with an existing order.

1. Open **Settings > My Suppliers**.
2. Click the desired supplier.
3. Enable the **Order required for deliveries** checkbox.
4. Click **Save**.

> **Note:** When this option is active, the POS App only allows adding articles from existing orders to goods receipts.

---

6. Invite a contact

To send orders directly from the Admin App to a brand representative, invite the contact.

1. Open **Settings > My Brands**.
2. Click the desired brand.
3. Click **Edit**.
4. Enter the representative's **email address**.
5. Click **Invite via Email**.
6. Select the **language** for the invitation email.
7. Click **Send Invitation**.
8. Click **Save**.

> **Note:** The representative must accept the invitation before you can send orders to them.

Remove a supplier

1. Open **Settings > My Suppliers**.
2. Click the desired supplier.
3. Click **Delete**.
4. Confirm the removal.

Frequently asked questions

My supplier is not displayed — what should I do? The supplier must be configured under **Settings > My Suppliers**. Only suppliers configured for your account appear in the filters.

What does the brand-supplier link do? When you select a brand during article creation, the system automatically fills in the linked supplier. The configured price factor calculates the sales price from the purchase price.

Can I override the price calculation manually? Yes. When creating or editing an article, you can always adjust the sales price manually.

Managing Users in the Admin App

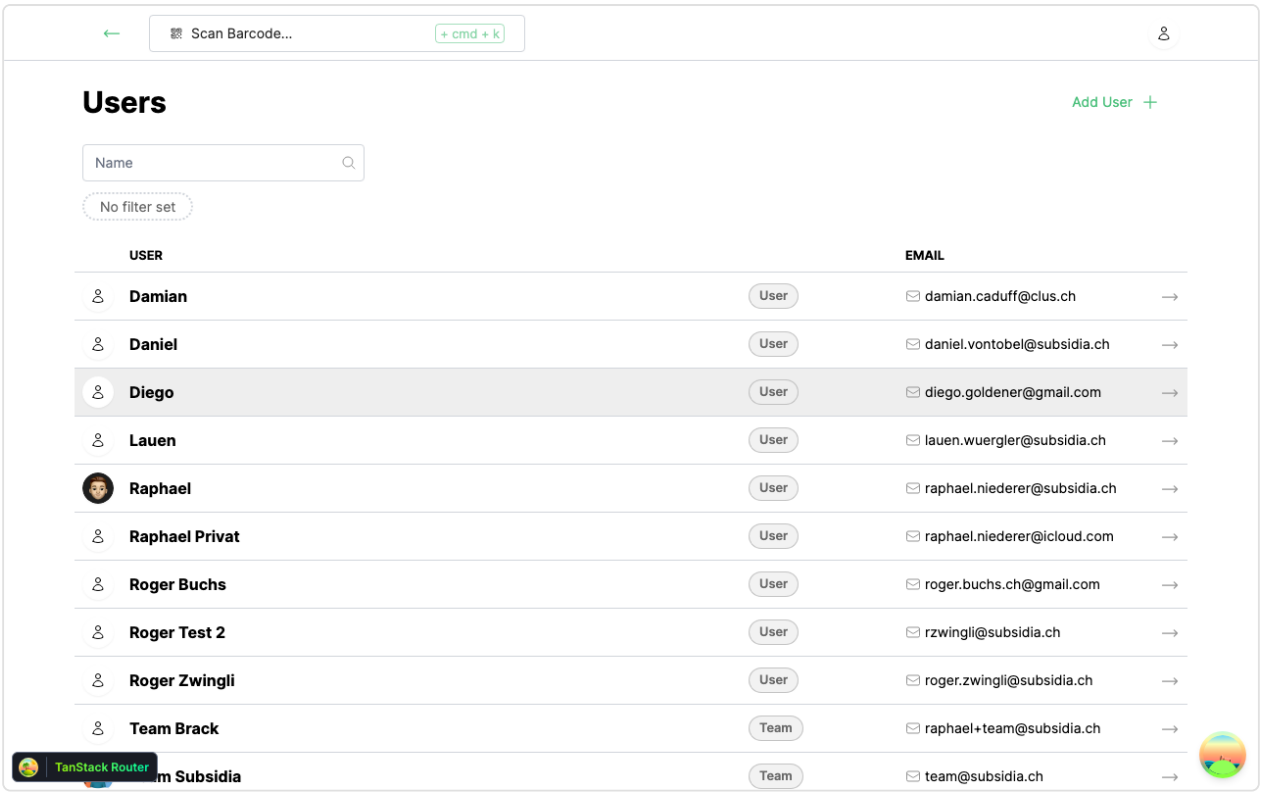
You create new users, assign roles, and set up team accounts for shared device access.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Settings** section

1. Create a new user

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **Users**.
4. Click **Add User** in the top right.

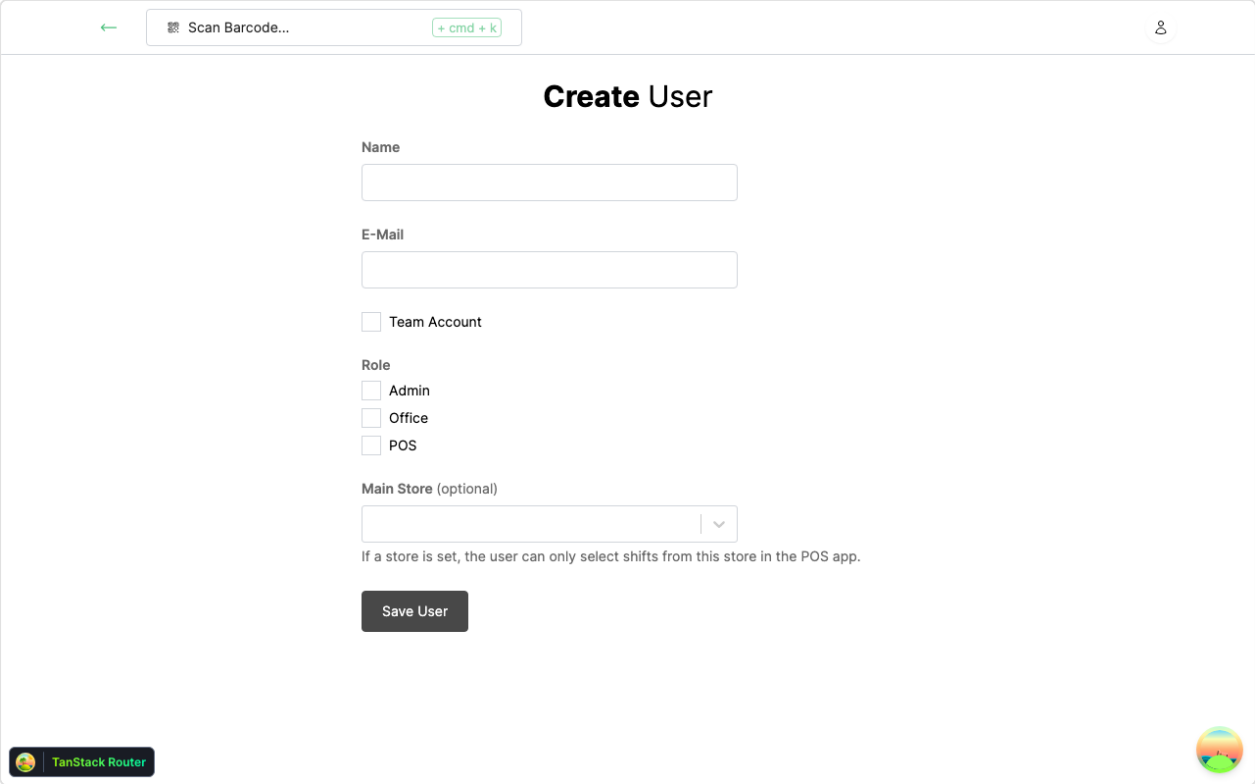


User list under Settings > Users.

1. Fill in the following fields:

Field	Required	Description
Name	Yes	First and last name of the user.
E-Mail	Yes	Email address for login. Must be unique.
Role	Yes	User permissions (see role descriptions below).
Main Store	No	Optional assignment to a store.

1. Click **Save**.



User form with name, email and roles.

The system creates the user and sends an email for password setup.

---

2. Assign roles

Each user requires at least one role:

Role	Description
Admin	Full access to the Admin App. Can manage users, settings, and all sections.
Office	Access to the Office App. Can handle stock movements and daily operations.
POS	Access to the POS App. Can process sales transactions.

A user can have multiple roles at the same time.

---

3. Create a team account

Team accounts allow multiple people to share one account on a common device.

1. Create a new user as described in step 1.
2. Enable the **Team Account** checkbox.
3. Assign the desired roles.
4. Click **Save**.

> **Note:** Each team account requires a unique email address. This can be a pseudo address. Team accounts cannot manage users — this requires an Admin account.

---

4. Edit a user

1. Open **Settings > Users**.
2. Click the desired user.
3. Adjust name, roles, or main store.
4. Click **Save**.

---

5. Delete a user

1. Open the desired user.
2. Click **Delete** in the top right.
3. Confirm the deletion.

Frequently asked questions

Can a user have multiple roles? Yes. You can assign the Admin, Office, and POS roles to a user simultaneously.

What is the difference between a user and a team account? A user is a personal account. A team account is a shared account for multiple people on one device. Team accounts cannot manage settings or users.

Setting Up Shifts in the Admin App

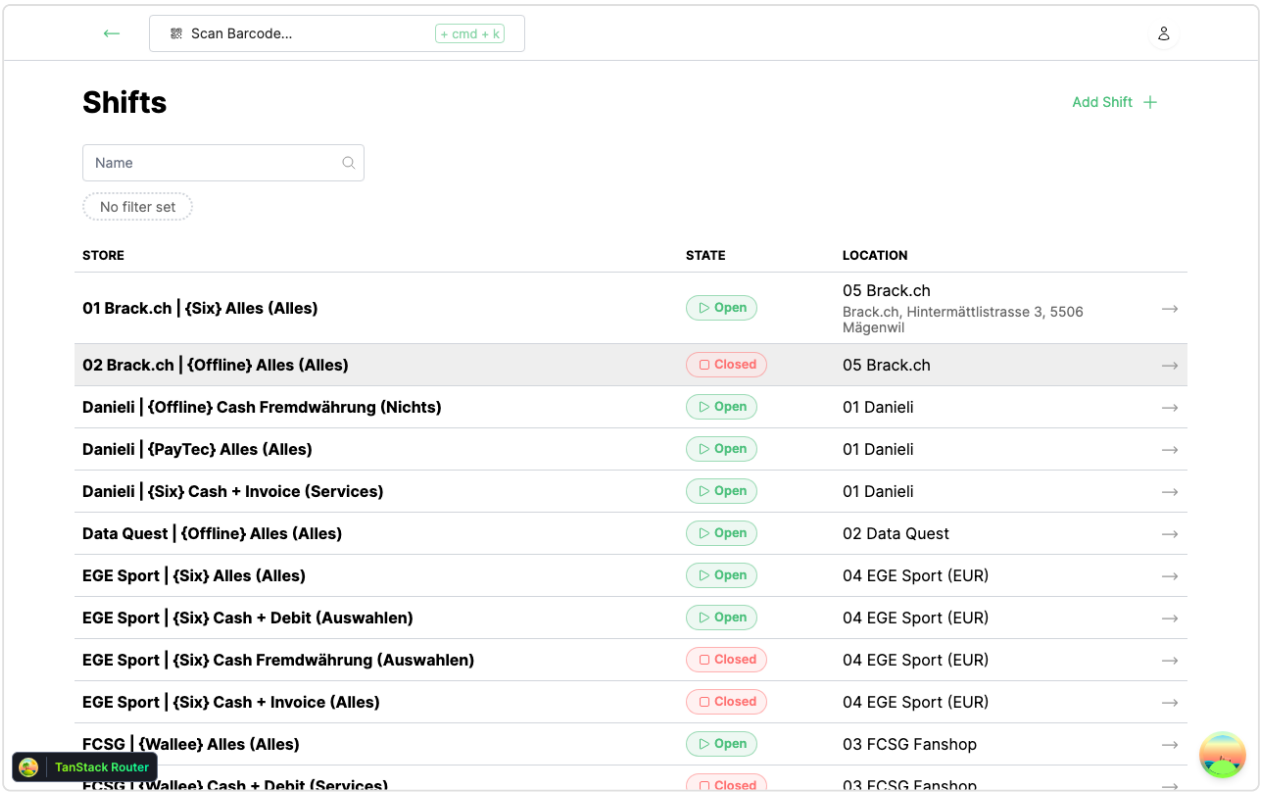
You create new shifts with payment methods, receipt configuration, and assign them to a store.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- At least one **Store** set up in the system

1. Create a new shift

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **Shifts**.
4. Click **Add Shift**.

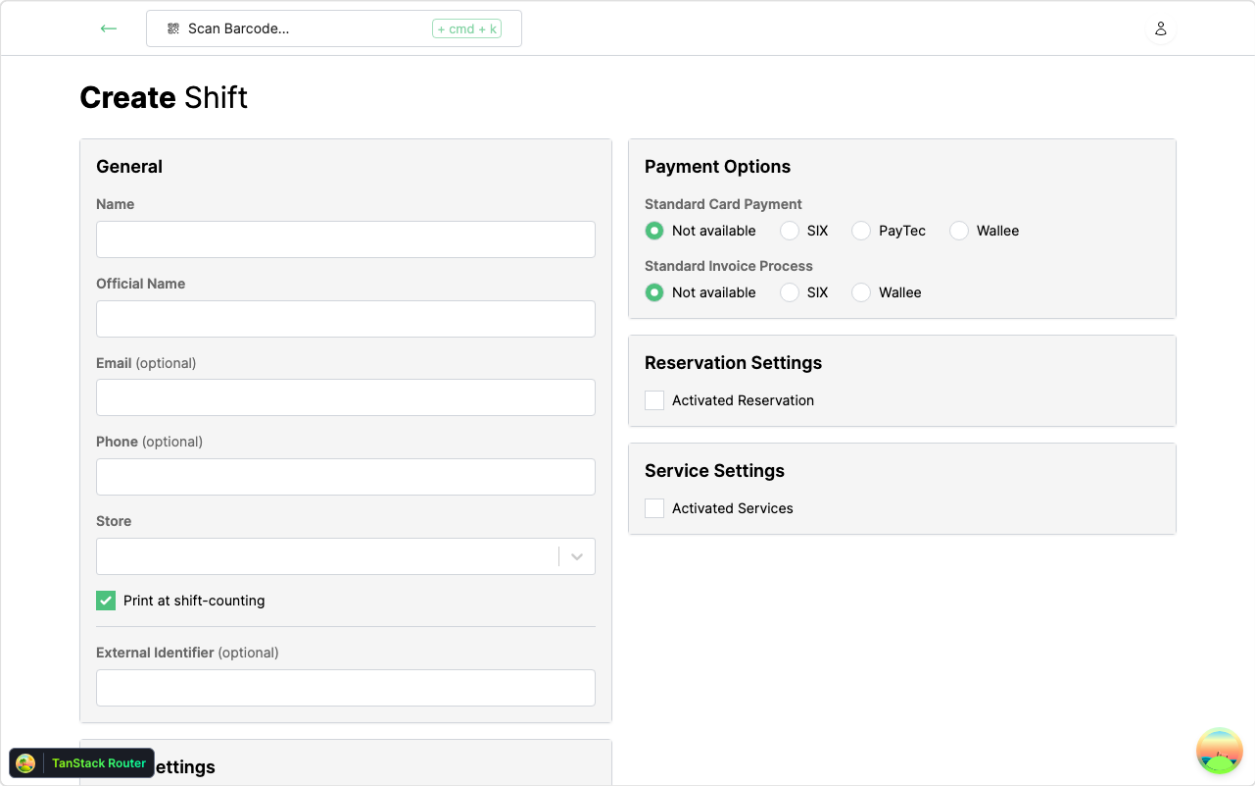


Shifts list under Settings.

1. Fill in the following fields:

Field	Required	Description
Name	Yes	Internal name of the shift.
Official Name	Yes	Name on receipts and documents.
Store	Yes	Associated store.
Email	No	Contact email (printed on receipts).
Phone	No	Contact phone (printed on receipts).

1. Click **Save**.



Shift form with name, store and contact details.

2. Configure payment methods

After creating the shift, configure the payment methods.

1. Open the shift.
2. Switch to the **Payment** tab.
3. Click **Add Payment Method**.
4. Select the **payment type** (e.g., cash, card).
5. Select the **currency**.
6. Define when the register should be counted (opening, closing, or reset to zero).
7. Click **Save**.

Repeat the steps for additional payment methods.

---

3. Configure shift reports

1. Open the shift.
2. Enable the **Shift report enabled** checkbox.
3. Select the **recipients** for automatic delivery.
4. Define whether the report should include **details**.
5. Click **Save**.

> **Note:** The report is sent automatically via email to the selected recipients when the shift is closed.

Download a report manually

1. Open the shift.
2. Click **Shift Report** in the top right.
3. Select a **date range** (maximum 7 days).
4. Click **Download**.

---

4. Reprint counts

1. Open **Settings > Shifts**.
2. Click the desired shift.

3. Switch to the **Counts** tab.
4. Click the printer icon next to the desired count.

> **Note:** Count receipts cannot be sent via email. Reprinting is done directly at the terminal.

Frequently asked questions

Can I change payment methods later? Yes. Open the shift and edit the payment methods on the **Payment** tab.

How do I change the selection duration on the receipt? Open the shift and adjust the **selection duration in days** and the **text**.

Configuring Currency Settings in the Admin App

You set up exchange rates for purchasing and selling in foreign currencies.

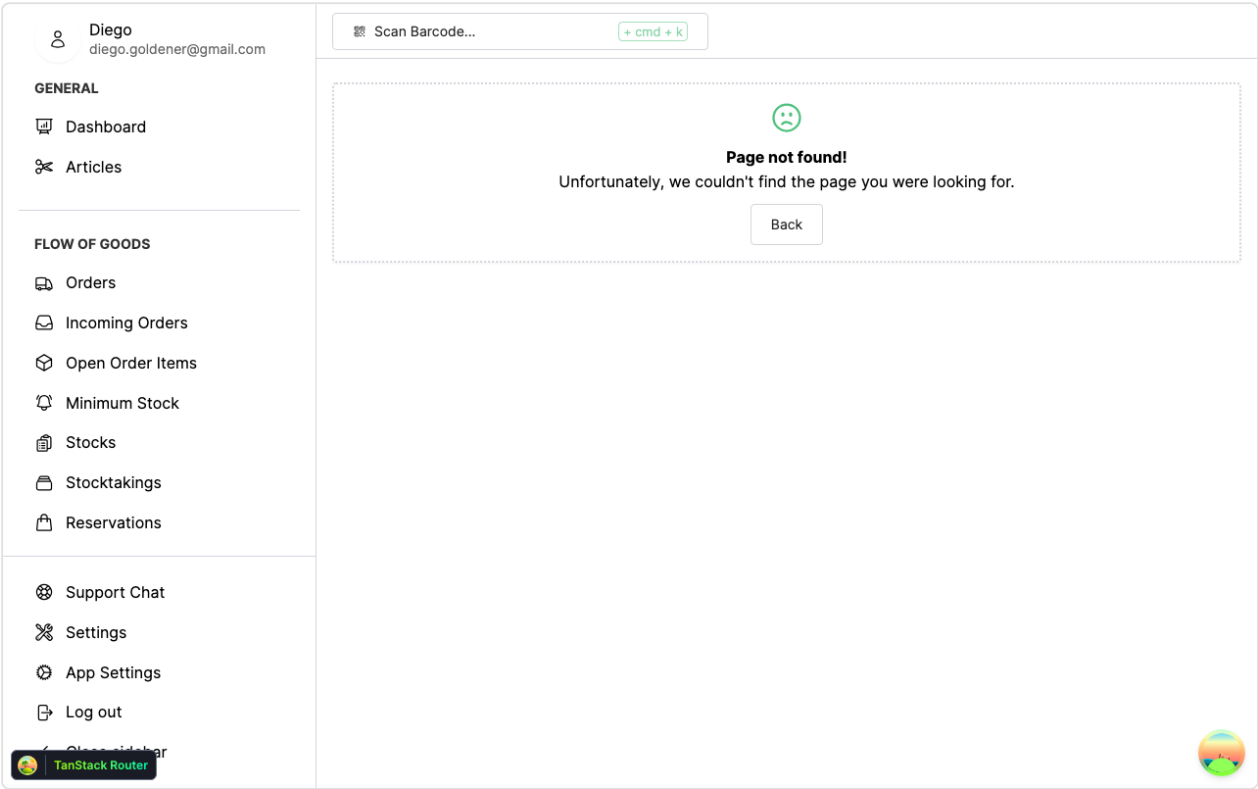
Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Settings** section

1. Purchase settings

Purchase settings define the exchange rate for purchase prices in foreign currency.

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **Purchase Settings**.
4. Click **Add Purchase Setting**.



Purchase settings with exchange rates.

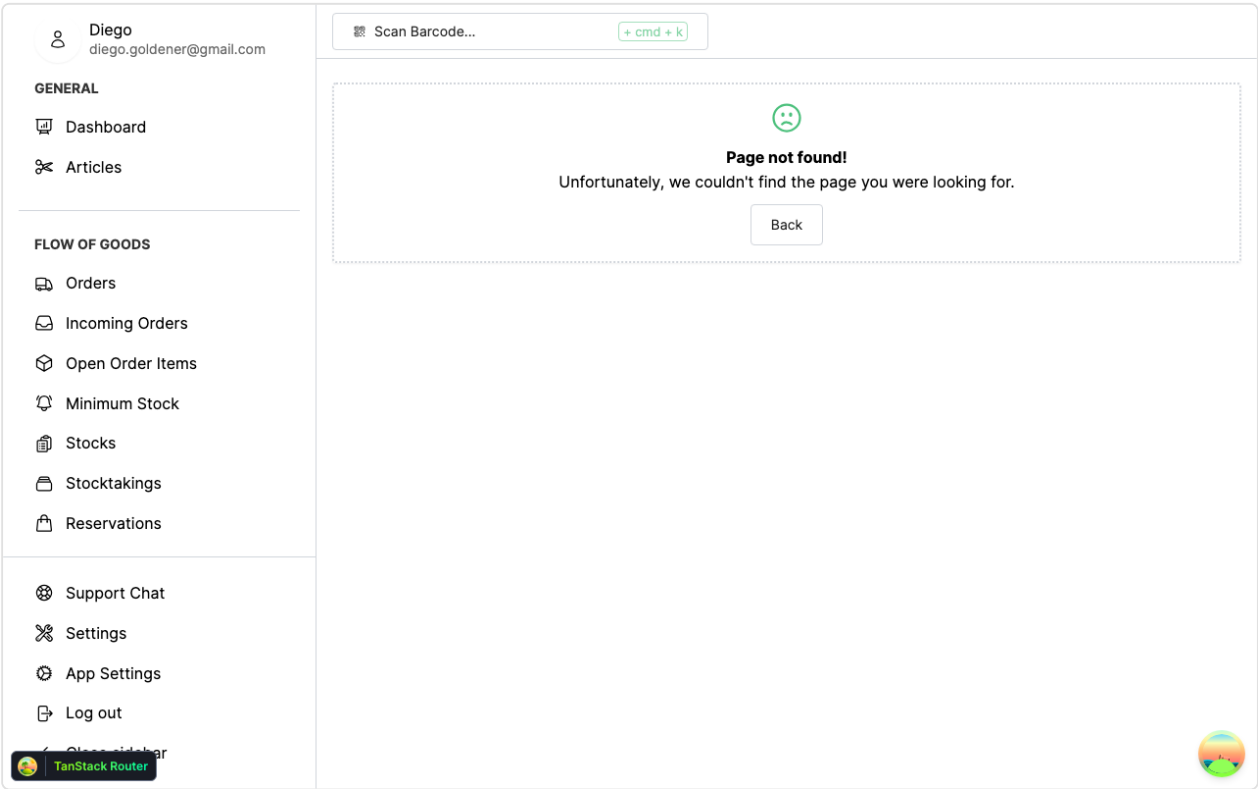
1. Select a **start date** (must be in the future).
2. Optionally select an **end date**.
3. Select the **currency**.
4. Enter the desired **exchange rate**.
5. Click **Add**.

---

2. Sales settings

Sales settings define exchange rates and optional markups for sales in foreign currency.

1. Click **Settings** in the sidebar.
2. Click **Sales Settings**.
3. Click **Add Sales Setting**.



Sales settings with exchange rates and markups.

1. Optionally enter a **fixed exchange rate**.
2. Optionally enter a **markup** (added to the exchange rate).

3. Select the **currency**.
4. Click **Add**.

> **Note:** The markup can be defined independently from the fixed exchange rate.

Frequently asked questions

Can I create purchase settings retroactively? No. The start date must be in the future.

Can purchase and sales settings have an end date? Yes. Both setting types support an optional end date.

Configuring Receipt Settings in the Admin App

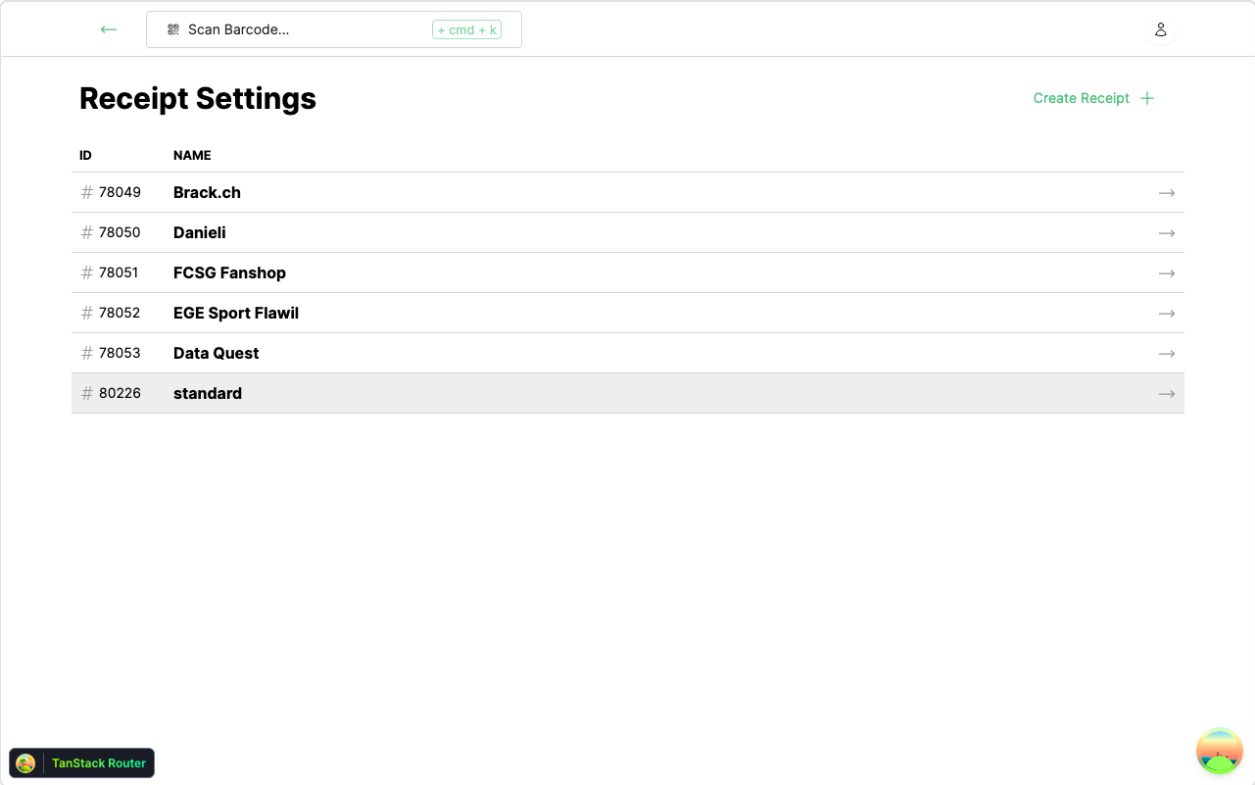
You create receipt configurations, define which receipt types are printed, and set the print order.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- Permission for the **Settings** section

1. Create a new receipt setting

1. Open the **Admin App**.
2. Click **Settings** in the sidebar.
3. Click **Receipt Settings**.
4. Click **Create Receipt**.



Receipt settings overview.

1. Enter a **name** for the setting.
2. Enable or disable the **checkboxes** for the desired receipt types.
3. Change the **print order** using the arrow buttons.
4. Click **Save**.

Available receipt types

Type	Description
Transaction receipt	Standard register receipt.
Card payment receipt	Receipt for card payments (customer/store).
Transaction receipt with signature	Receipt with signature field.
Gift card	Gift card receipt.
Service receipt	Service receipt.

---

2. Add or remove receipt types

- Click the **plus icon** to add a new receipt type.
- Click the **trash icon** to remove a receipt type.

Frequently asked questions

Can I change the print order? Yes. Use the arrow buttons to adjust the order of receipts.

Activating Swiss QR Invoices in the Admin App

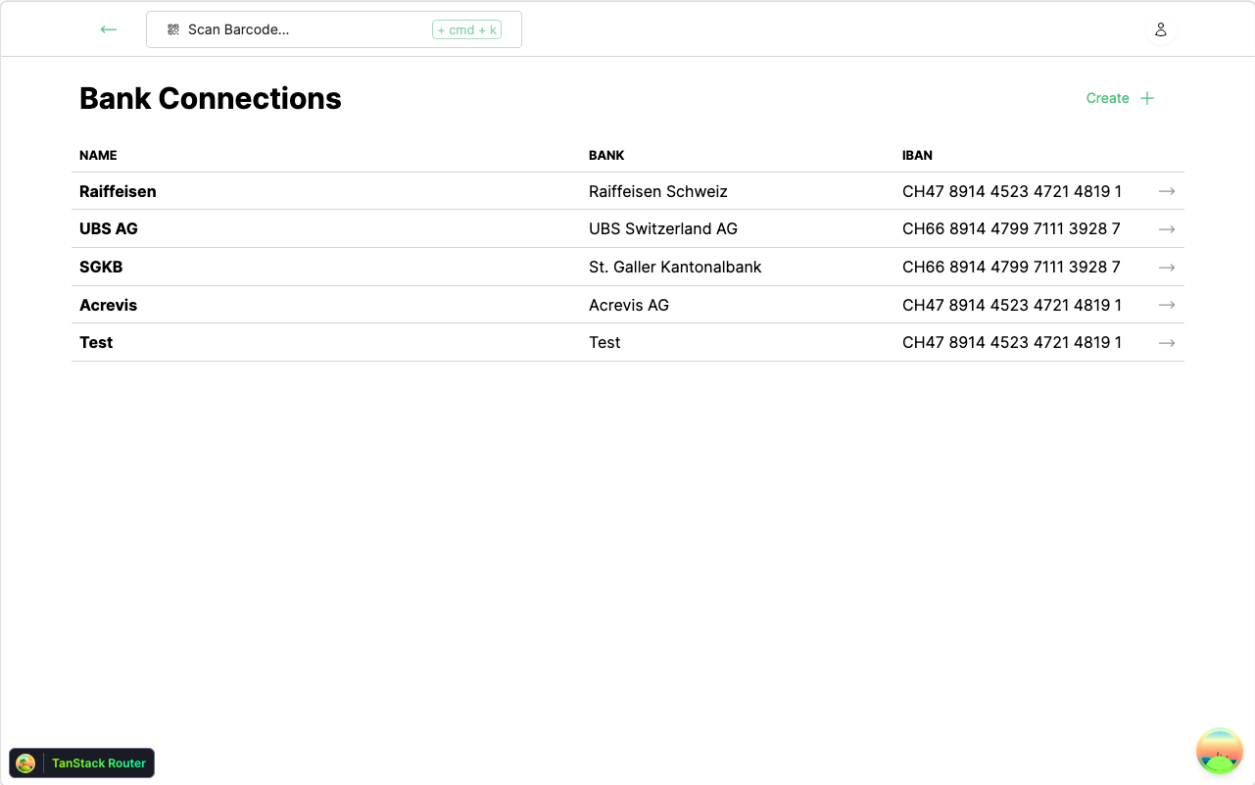
You set up the bank connection and activate the "Invoice" payment method so the system automatically creates a Swiss QR code on every invoice with a Swiss address.

Prerequisites

- Access to the **Admin App** with **Admin rights**
- A valid **bank connection** is set up in the system

Set up QR invoices

1. Open the **Admin App**.
2. Navigate to **Bank Details** (`admin.subsidia.ch/bank-details`).
3. Open the desired bank connection.



Bank details for QR invoices.

1. Navigate to **Settings > Shifts** and select the desired shift.
2. Switch to the **Payment** tab.
3. Click **Add Payment Method**.
4. Select the type **Invoice**.
5. Select the corresponding **bank connection**.
6. Enter the **payment deadline**.
7. Click **Save**.

The system now automatically creates a Swiss QR code on every invoice with a Swiss address.

Frequently asked questions

Does the QR code appear on all invoices? The QR code only appears on invoices with a Swiss address.

Do I need a special bank connection? The bank connection must be set up in the system. The QR code is generated from the bank details and invoice information.
